SARGENT'S
LIBRARY

✎ Mr. Geo. F. Sargent begs to inform his friends and patrons whom he has served for the past 10 years, that, in order to meet the demands of an increasing business and to provide adequate capital and ample facilities for manufacturing, he has transferred the business hitherto conducted by him to the

SARGENT MANUFACTURING COMPANY,

of which he is Managing Director. The Company retain the old premises, No. 816 Broadway, and have also leased the adjoining spacious Store, No. 814 Broadway, and have secured on 41st Street a Factory with ample facilities for manufacturing his Specialties under his own immediate supervision.

The SARGENT MANUFACTURING COMPANY beg to announce that it will be their aim to furnish a warehouse from which may be purchased or ordered every article and device for promoting the comfort of Invalids and for the alleviation of suffering; as well as articles of comfort and luxury for the household and library.

It is intended to supply to the public a need which has long been apparent, viz., a central depot where *all* the articles for Invalids' use may be procured.

Every article will be guaranteed to be of the very best workmanship and of exactly the quality stated, and anything bought of or ordered from them which does not conform to the representations concerning it may be returned at their expense and the purchase money will be refunded.

They realize that those who seek to supply the wants of the sick and the suffering are bound by every consideration of humanity and honor to supply the very thing that is needed in respect to quality of material and excellence of workmanship, and that the absolute reliability of the manufacturers in this regard is the condition on which depends a successful business.

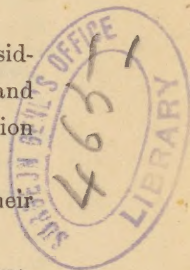

On this cardinal principle the Sargent Manufacturing Company have established and will maintain their business.

They are prepared to make to order, at short notice, any special device or design not found in their catalogue, and Physicians and Surgeons may to them confidently recommend their patients.

Their stock of specialties in Library and Household luxuries will also be more complete than can be found elsewhere in this country.

THE SARGENT MANUFACTURING CO.,

814 AND 816 BROADWAY, NEW YORK.

TO CORRESPONDENTS.

Please give this catalogue a careful perusal, and preserve for future reference.

By ordering direct of us, you are sure to secure fresh goods, latest improvements, and lowest prices.

In sending orders be as explicit as possible.

In ordering, the best way is to accompany the order with a remittance.

Orders to be shipped by freight must be accompanied by a remittance or satisfactory reference.

We will ship your order C. O. D. by express, if you prefer it, but you save the return money charges by sending the money to pay for the goods with the order.

Remittances should be made by Draft on New York, Money Order, or Registered Letter.

On goods made specially to order a deposit of 25 per cent. is required.

If practicable give shipping directions. When none are given we use our own judgment, always trying to secure the quickest transit at lowest cost. We make no extra charge for packing or cartage.

We have but one price.

Our terms are NET CASH without discount.

Address all communications to

THE SARGENT MANUFACTURING CO.,

SARGENT'S MONARCH RECLINING CHAIR.

THE perfect development of our Monarch Chair has occupied years of patient toil and costly experiment. And we now take, we think, a pardonable pride in offering it to the public, as the result of our efforts, knowing it to be superior in every respect to ALL other Reclining Chairs that have preceded it.

It is indeed a chair of wonderful capabilities. There is no position which the body can assume to which the chair may not be adjusted to conform. The back is adjustable to any degree, from a right angle to a parallel with the seat; the seat is adjustable to six different inclinations, admitting of either a level seat or a seat inclined either above or below the level; the foot rest is also adjustable to eight different positions.

Thus while the chair admits of a grand total of 384 different positions, its artistic design so conceals its mechanism, that when adjusted to any one of these positions, it looks as though it were made for that position only. In our illustrations we have striven to convey as nearly as possible a correct idea of the chair, yet they fall far short of doing it justice. In style it is both elegant and unique, and barren of all the repellant features which characterize an invalid chair. It is ornamental in the parlor, practical in the library, and of inestimable value in the sick room.

SARGENT'S MONARCH RECLINING CHAIR.

To thousands suffering from various ailments, a chair, adapted to their peculiar ills, would make their lot in life much more endurable, and render a great deal of the pain and discomfort they experience unnecessary. For instance: To such as suffer with asthma, a chair admitting of a very upright position of the back with support for the head and with the ability to change the position, is required. To those afflicted with dropsy or gout, the ability to have the legs and feet elevated in a line of continuity with the seat is a great advantage. In cases of heart trouble, the position essential to insure a perfect circulation of the blood, and the easiest action of the heart, is one in which there is entire relaxation of the whole muscular system of the body; one which avoids pressure upon the arteries and veins from contracted muscles or tense tendons. In hip or spinal troubles or bed sores, the weight of the body should be so distributed that the injured or weak parts should not be aggravated by an inequality of pressure. In cases of fracture, the ability to adapt the position of the body to the peculiarity of the case, is highly important; and to that large class of sufferers who are afflicted with insomnia and nervousness, a reposeful position of the body will often woo sleep when all other agencies fail. To all of these requirements we have been thoroughly successful in adapting our Monarch Chair, making it at the same time as attractive to the eye as it is comfortable to the body.

Figs. 1 and 2 represent it as an easy chair for the parlor or library, the former giving a front, and the latter a rear view.

In Fig. 2 our celebrated "Table Universelle" (which is elsewhere described) is incidentally introduced for the purpose of exhibiting the qualities of the chair for study or library use. These two cuts will facilitate an intelligent understanding of the general construction: Fig. 2, the manner of regulating the inclination of the back, which is supported by the ratchets, resting on the rod; Fig. 1, the arrangement of the leg-rest, which is represented as pushed under the seat. The leg-rest has a two-fold use; when drawn but partially out it answers all the requirements of an ottoman, a feature which enhances materially the value of the chair.

SARGENT'S MONARCH RECLINING CHAIR.

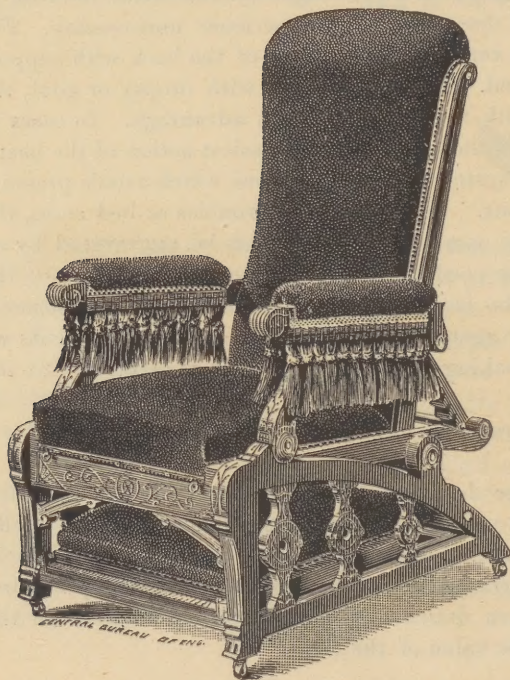

Fig. 1.

Fig. 2.

Figs. 1 and 2 represent it as an easy chair for the parlor or library, the former giving a front, and the latter a rear view.

SARGENT'S MONARCH RECLINING CHAIR.

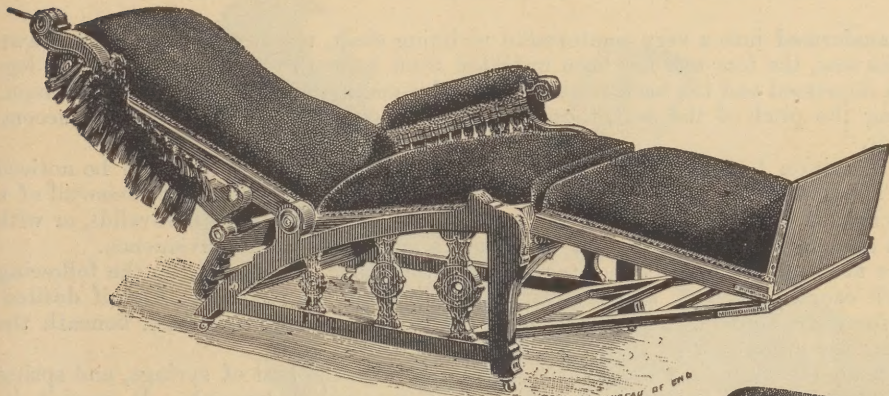

Fig. 3 shows the manner of raising the arms to facilitate getting in or out of the chair.

Fig. 3.

Fig. 4 represents it as a perfect Reclining Chair, with back reclined, seat depressed at the back, and leg-rest extended.

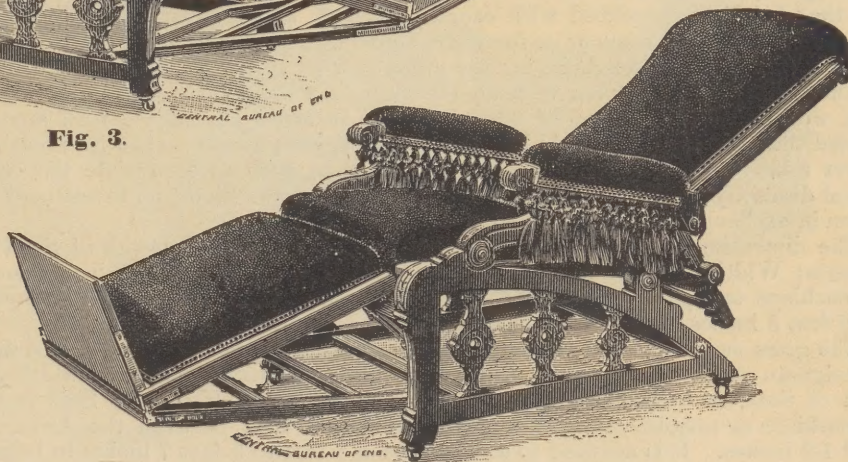

Fig. 4.

SARGENT'S MONARCH RECLINING CHAIR.

In figs. 3 and 4 the chair is transformed into a very comfortable reclining chair, the leg-rest has been drawn out and attached to the front of the seat, the foot-rest has been unfolded from beneath the upholstery of the leg-rest; the back of the seat has been depressed and the back reclined. All this manipulation requires but a moment, and with the exception of changing the pitch of the seat, these and all other changes of position can be accomplished by the occupant of the chair.

Fig. 4 represents the chair in a position but slightly changed from that of fig. 3. In fig. 3, it will be noticed that one of the arms is raised. The ability to dispose of the arms in this manner to facilitate the removal of a helpless person to and from the chair, is an advantage that will not lack for appreciation with invalids, or with those who attend them. To ladies also, for obvious reasons, it will prove a matter of great convenience.

In figs. 1, 2, 3 and 4 the chairs are represented as upholstered fast to the frame. In fig. 5, on the following page, the chair is represented with caned seat, back and leg-rest, which is adapted to loose cushions if desired. They are admirable in summer or for warm climates. In the upholstered chairs the materials used beneath the outside covering on all the chairs are the same.

The chairs are upholstered with all the skill that experience can teach; with the best of springs, and spring edges, with deep top stuffing of pure hair, and in strict accordance with anatomical demands. It cannot be expected that such a chair should be sold at a low figure; it competes with no other, being pre-eminently the best, and yet relatively there is no cheaper sold; and to such as appreciate the comforts of life, or to those whom physical disability render necessary the most favorable conditions, no investment can be made where better value is given in exchange for that received.

The dimensions are as follows: Height of Back, 31 inches; Depth of Seat, 22 inches; Length of Leg-Rest, 22 inches; Width of Chair between the Arms, 22 inches; Height of Seat from floor without cushions, 15 1-2; with cushions or upholstered, 18 1-2 inches; Width of Chair over all, 25 1-2 inches. It is adapted to a person from 5 feet 5 inches, to 6 feet 2 inches in height.

The great success of the Monarch has necessitated the manufacture of the same chair in a smaller size, which we designate as *The "Empress" Reclining Chair*. The dimensions of which are—Height of Back, 28 inches; Depth of Seat, 20 inches; Length of Leg Rest, 20 inches; Height of Seat from floor without cushions, 14 1-2; with cushions or upholstered, 17 1-2 inches; Width of Seat between the Arms, 19 inches; Width of Chair over all, 22 1-2 inches. It is adapted to a person from 5 feet to 5 feet 7 inches in height.

SARGENT'S MONARCH RECLINING CHAIR.

Fig. 5.

The above illustration represents the MONARCH Reclining Chair with Cane Seat, Back and Leg-Rest.

SARGENT'S MONARCH RECLINING CHAIR.

The Chair represented by Figs. 6 and 7 is the same in principle as those previously described. It differs from them, however, in the back, which is gracefully shaped and has side rests for the head. It is also beautifully carved after the antique style of decoration.

Fig. 6 shows how thoroughly the reclining qualities of the Chair are adapted to the perfect repose of the body. Fig. 7 represents the manner in which the leg rest serves the purpose of a foot rest. The head rests are a feature which greatly conduce to the comfort as well as add a substantial beauty to the Chair.

The dimensions are the same as those of regular "Monarch." We will make them the size of the "Empress," or, in fact, any size required, to order.

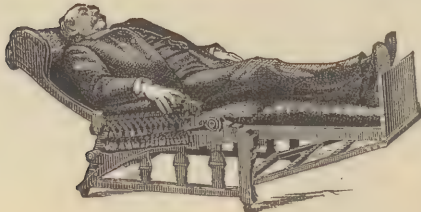

Fig. 6.

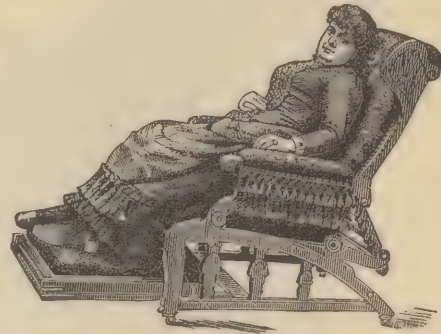

Fig. 7.

APPURTENANCES WHICH ADD COMPLETENESS TO PERFECTION.

SARGENT'S TABLE UNIVERSELLE, shown in Fig. 2, \$17.50 in Black Walnut or Cherry; \$22.50 in Mahogany. For detail see description under that heading elsewhere in Catalogue.

THE PERFECTION READING DESK can be attached to this or any other chair. Price, No. 1, \$3.50; No. 2, \$4.00; No. 3, \$4.50; No. 4, \$5.00. See list under that heading for detail.

THE PERFECTION COMBINATION READING STAND, in Fig. 5, represents our new Combination Reading Stand and its application to use. The Book Rest, which is attached to the standard by jointed arms, is counter-balanced by the revolving Side Shelf, which projects in the opposite direction. The standard is adjustable in height, the legs fold, the Book Rest and Side Shelf are detachable, and the whole thing may be packed into small compass for transportation. It is adapted to use at the side of any Chair, Lounge, or Bed. It is simple, graceful, light, and strong. Price of Perfection Combination Reading Stand, \$7.00.

THE "HOLLOWAY" READING STAND, which is fully illustrated and described under its proper heading, is also a most perfect device for reading when used in connection with the "Monarch" or "Empress" Chairs.

SARGENT'S MONARCH RECLINING CHAIR.

PRICE LIST—UPHOLSTERED.

The frames are understood to be of Black Walnut. Oak, Cherry, or Ash will be furnished to order at the same price, and Mahogany at \$10 extra.

Price with covering of	Cretonne, according to quality and trimmings,		\$80.00 to \$90.00
" " " "	All Wool Terry, any color,		80.00
" " " "	Raw Silks, Tapestries, etc.,		80.00 to 100.00
" " " "	Best Mohair or Silk Plush,		100.00

With Best Silk Plush,		90.00
With Best Leather,		85.00
Removable Cushions for the Arms to match any upholstery, \$5.00 extra.		

THE MARK'S IMPROVED ADJUSTABLE FOLDING CHAIR.

Fig. 1.

To facilitate a correct understanding of the merits of this chair we present a series of illustrations, from which aided by the following description, the reader may be enabled to judge of it almost as well as though by ocular demonstration.

Fig. 1 suggests so much of luxurious ease that further comment on this score is superfluous. In fig. 2 we see how

THE MARK'S ADJUSTABLE FOLDING CHAIR.

admirably the chair is adapted to use as a couch or impromptu bed, in which respect it is superior to any other, it being 6 feet long by 23 inches wide, the leg rest forming an adjustable head.

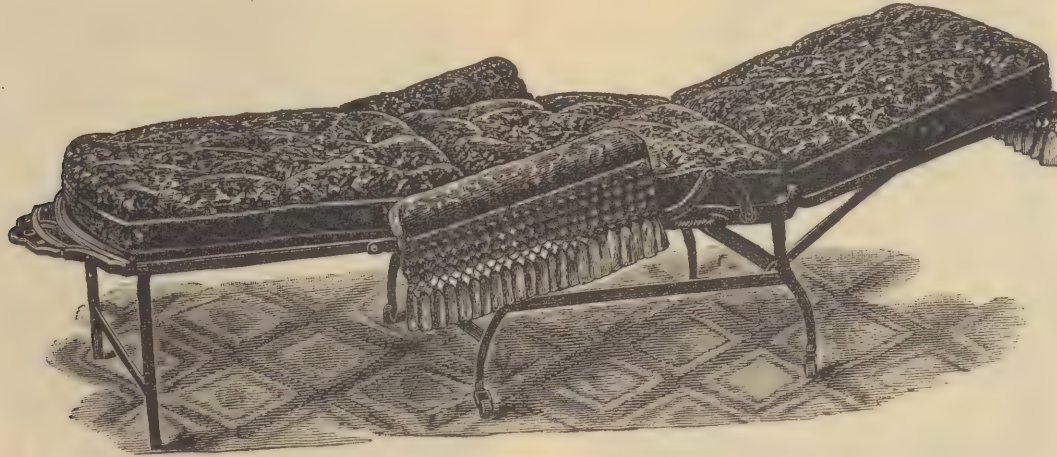

Fig. 2.

In fig. 3, the chair is represented as an upright Easy chair, the leg rest being folded over on to the seat and with the cushions removed. In fig. 4, in the same position with the *cushions*. Fig. 5 shows the chair folded for transportation, in which shape occupies a space of 2 feet and 8 inches, and weighs 45 lbs.

The chair is constructed of a frame of wrought iron, within which are fitted frames of black walnut, with closely woven cane for the back, seat, and leg rest, making the chair complete without the upholstery, and particularly adapted to summer use and very desirable for warm climates. With the addition of cushions the chair is luxurious, either as an upright or reclining chair or bed. The back of the chair is adjustable to any inclination as is also the leg rest. There are over a hundred positions which the chair is capable of assuming. Its portability and strength renders it especially adapted to army or camp use, and as an easy chair for general house, library, or office use as well as a chair for invalids; it is deservedly popular.

THE "FAVORITE" RECLINING CHAIR.

No. 101.

No. 102.

THE "FAVORITE" RECLINING CHAIR.

Our experience in catering to comforts as well as the necessities of our patrons, has taught us that no one chair will meet all the requirements of every person any more than one shoe will fit every foot. We aim, therefore, to furnish such a variety of kinds and styles, that any one wishing a chair adapted to their personal wants, cannot fail to select a suitable one from our stock.

In the "Favorite," we offer a chair which has certain commendable advantages over any other of our styles. In making, then, the selection of an article on which so much of one's home comforts depend, it is well to consider all the essential points of merit.

On the preceding page, the cuts represent our two styles of the "Favorite," showing also two of the different positions.

The chairs are alike in principle; No. 101, however, being plainer, and lower priced than No. 102. In the former, the back is shown as reclined and the leg-rest drawn out, while in the latter the chair is shown in the position of an ordinary easy arm-chair, with the back upright and the leg-rest folded beneath the seat.

To the 102 is attached our No. 2 Perfection Desk (for details of which see description on another page).

Of all the known Reclining Chairs, to the "Favorite" will be awarded the palm for the nice concealment of the mechanism. The only indications of its being other than an elegant parlor

Easy Chair are the two little thumb-knobs, one on the outside of each of the arms, which you press down when you wish to change the position of the back.

The back works with a spring which is concealed beneath the upholstery, at the joint of the seat and the back, which renders it only necessary for the occupant of the chair to press these knobs, and lean back or forward to the desired inclination, and the back follows the movement of the body. The leg-rest is drawn out from underneath the seat which with the back reclined, you have a most perfect full length reclining chair. All the changes of position are accomplished by the occupant while in the chair.

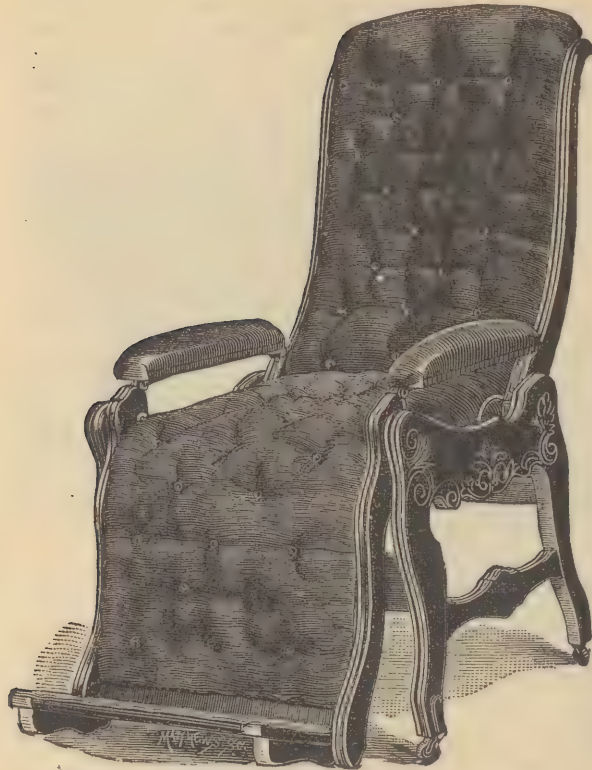

In the "Favorite," too, almost every one can be suited as to price, starting at a very low figure, and increasing in price according to quality of frame and upholstery. We can furnish a chair cheaply enough to be within the reach of anybody, or nice enough to adorn the finest parlor.

For the Parlor or Library, this chair has many advantages, it being of the ordinary height and proportion, you can sit comfortably at a table or desk to write, and there are no forbidding mechanical contrivances visible to offend the eye. It is very popular with students and professional people, as it is peculiarly adapted to their wants. The chair is constructed according to anatomical demands, with springs in the seat, and the back shaped to conform to that of the body, supporting the lower part of the back, and giving rest to the head.

AUTOMATIC FOLDING RECLINING CHAIR, NO. 85.

This Chair combines every essential point to make it desirable either in sickness or health. To adjust it to any position, all that is necessary for the occupant is to lean back and secure the Chair at the desired point.

To still add perfection, if desired, the independent leg rest, as shown on No. 17, Rolling Chair, can be attached; thus enabling the occupant to sit upright, with feet raised, a position which is frequently necessary, in cases of broken legs, dropsy, gout, etc.

For packing away or shipping, the chair can be folded to small dimensions.

Height of Back from Seat, . . .	34 inches.
Height of Seat from foot board, 17 "	"
Height of Seat from floor, . . .	20 "
Width of Seat,	20 "

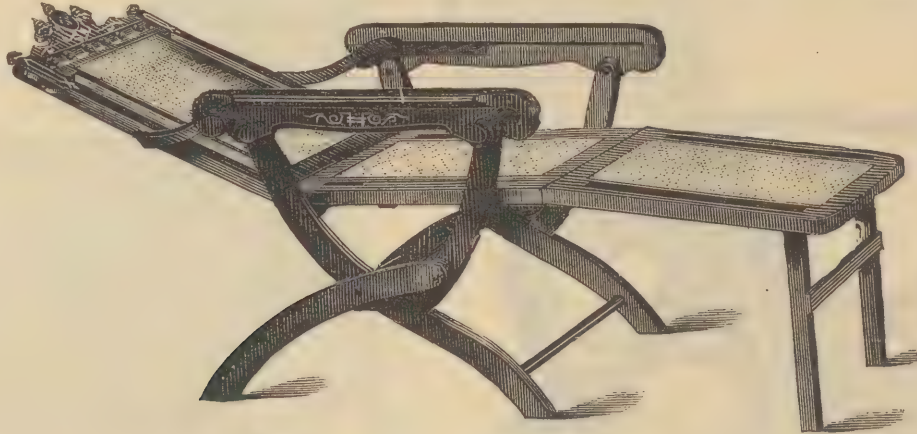

PRICES OF NO. 85.

Upholstered in all Wool Terry, any color, Hair Cloth or Raw Silk, with springs on seat and back. Caned front, \$9, additional. Loose cushions made to order; price according to material, \$10 to \$15 additional. See list.

ADJUSTABLE FOLDING CHAIR.

It is constructed of solid black walnut with **No. 65.** back and extension, with the back and arms tastefully embellished with carving. The back can be adjusted to any position without moving from the chair, and the folding is but the work of a moment. When folded it is 38 x 26 inches x $8\frac{1}{4}$ inches thick.

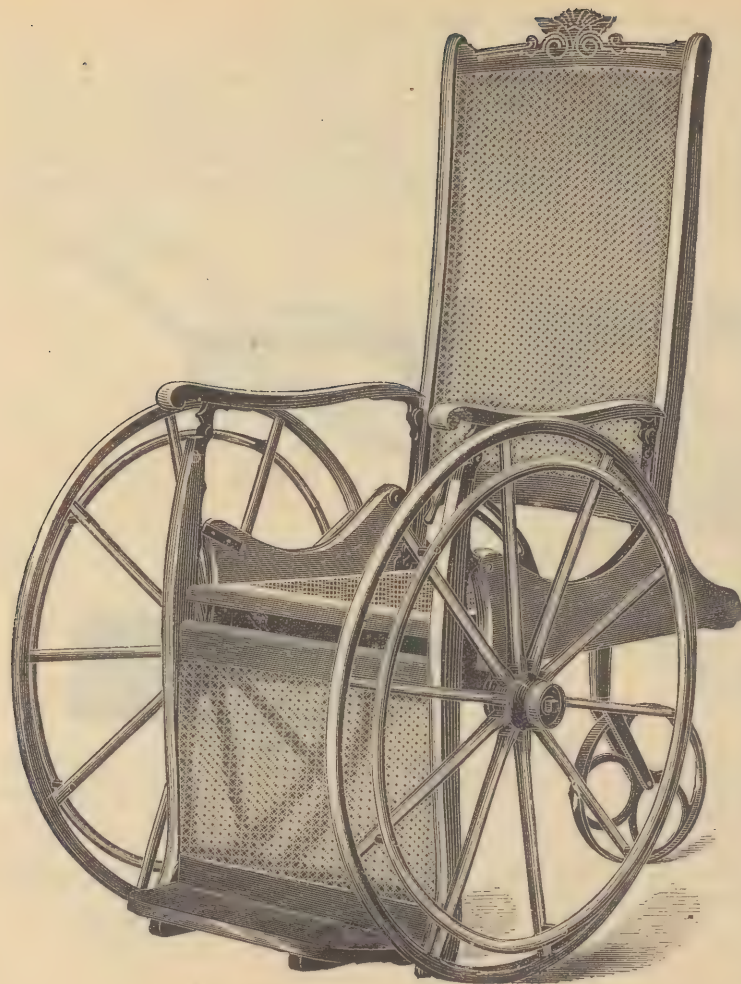

AS A RECLINING CHAIR.

It is a most desirable chair for the Library, Sitting-room, Office or Veranda, as well as being specially adapted to the use of Invalids.

It is cool in summer, and can be upholstered with loose cushions so as to make it very attractive.

PRICE FOR No. 65.....\$10 CO.

INVALIDS' RECLINING ROLLING CHAIR.

No. 42.

Since the introduction of this Reclining Rolling Chair in 1865, many important improvements in its construction have been made, and it is now one of the best for those unable to walk. By its use the invalid is enabled to assume any position, and propel himself from place to place at pleasure. The joints, twelve in number, upon which the reclining motions depend, are of iron, accurately adjusted and firmly secured to the back, seat, front, and arms of the chair, thereby adding great strength and durability. These joints are so arranged that the weight of the occupant is evenly distributed on the different parts, so that they mutually balance; thus but little exertion is required on the part of the invalid to assume any desired position; a slight backward motion of the body causing the back of the chair to move backward, and *vice versa*.

When adjusted to the desired position, it can be securely fastened; thus this Invalid Reclining Rolling Chair perfectly accomplishes all that can be desired for the comfort of the occupant.

The wheels have an outside hand rim for street use, to save the hands from contact with dirt; also an *oval* iron tire, which runs with less noise and will not cut the carpets. If desired, a *flat* tire can be put on.

In its construction, not only has a superior quality of workmanship been attained, but the proportions of the chair are anatomically correct.

The above description applies also to chairs Nos. 7, 17, 27, and 67, which are adaptation of No. 42, to meet special wants.

For prices, fuller description, and cuts showing the different positions in which the chair can be used, we refer to the following pages.

INVALID RECLINING ROLLING CHAIR!

No. 7 Chair is the same as No. 42 Chair, but with the addition of steel elliptic springs between the seat and the gear, thus preventing the jar caused by rolling over uneven ground, and making it very desirable for out-of-door use.

Its dimensions are the same as No. 42, except that the seat is three inches higher from the floor.

It will conveniently pass through a twenty-eight inch doorway.

PRICES of No. 7.

Oak, Caned, . \$37 00

No. 7, Upright Position. Bl'k Walnut, Caned, 40 00

Oak, upholstered in all Wool Terry or Hair-

cloth, springs in seat and back, and leg-rest

CUSHIONS FOR ROLLING CHAIRS.

To Nos. 42, 7, 17, 27, 67, 97, Rolling Chairs and Nos. 65 and 85 Reclining Chairs, for those preferring loose cushions, we give the following list of prices : In best all Wool Terry, with best hair, including three cushions, viz. :

One for back, one for seat, and one for leg

rest, \$15 00

The same in good but not best hair, . 12 00

For back cushion in best hair, . . 6 00

For seat cushion " . . . 4 50

For leg rest cushion, " . . . 4 50

The same in good hair ; back cushion, . 5 00

Seat cushion, 3 50

Leg cushion, 3 50

Head Cushions in Cretonne, . . 75

" " " Terry, . . . 1 50

Cushions made in leather or other material, to order, to cost according to material used. Air Cushions also furnished.

INVALID RECLINING ROLLING CHAIRS.

This is the same as our No. 42, but has a recently invented attachment for raising the Leg Rest independently of any motion of the back. The attachment is made of Iron, is very strong and simple in its working; by pushing on the handle the rest is raised to any desired angle and is at the same time lengthened, thus giving ample room for the limbs. The chair can also be used the same as No. 42, that is, Back and Leg Rest working together.

Dimensions same as No. 42.

Will pass through a doorway not less than 28 inches wide.

No. 17.

Will pass through a doorway not less than 25½ inches wide.

HANDLES FOR PUSHING.

These Handles are made so as to be put on and taken off easily and quickly, and are constructed of bent wood with turned push-bar, being similar in appearance to the handle shown on No. 37.

Handles can be applied to Nos. 42, 7, 17 and 27, for \$3.

RUBBER TIRES.

In cases where the invalid is very sensitive, the addition of *Rubber Tires* over the iron tires will prove beneficial, as by their use all noise caused by iron rolling over pavements, etc., is prevented.

Rubber tires on the two side wheels will cost.....	\$6 00
Rubber tires on the back or caster wheel will cost.....	2 00

ATTACHMENTS FOR ROLLING CHAIRS.

HANDLES FOR PUSHING.

No. 42.—WITH HANDLE FOR PUSHING, COMMODE, WRITING DESK, AND CANOPY.

COMMODE.

This will be found a great convenience in many cases. The seat is wood, with cover for hole. Two caster wheels are used, which gives ample room for the pan or cover to be placed in position from behind, and attached to the bottom of the seat, without disturbing the invalid.

Price.....\$5 00

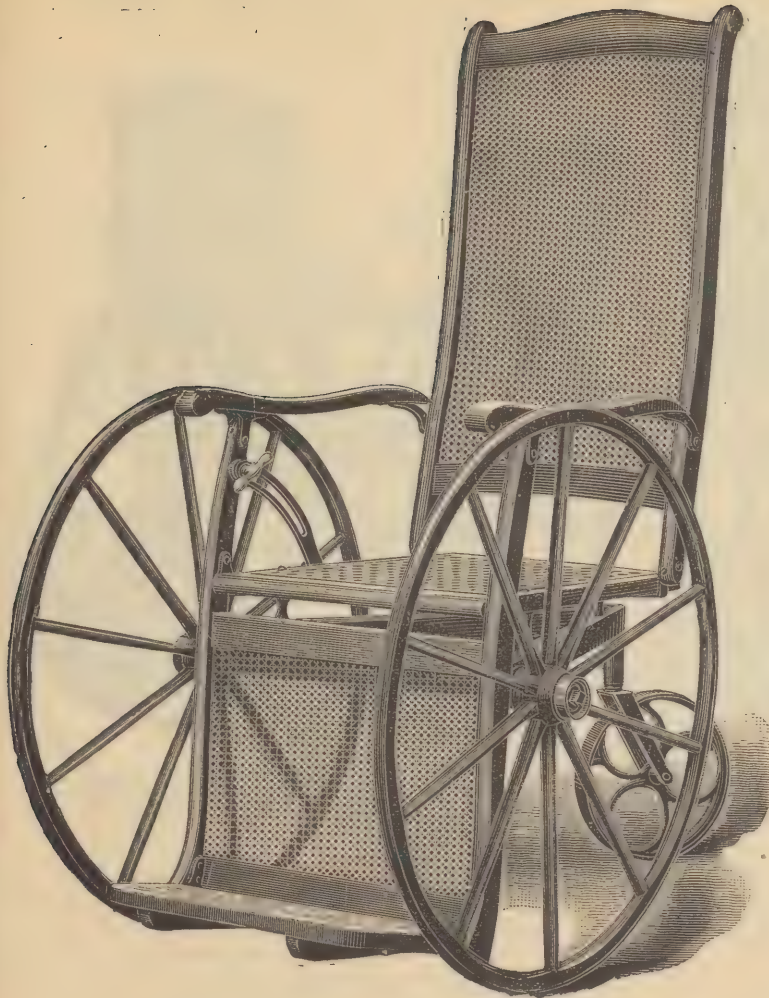

These Handles are made so as to be put on and taken off easily and quickly, and are constructed of bent wood with turned push bar.

Iron sockets are attached to the chair into which the handle fits, and is held secure by an iron pin.

Handles can be applied to any part of our Rolling Chairs for \$3.00.

An Adjustable Canopy as here shown, furnished for \$3.00.

INVALID ROLLING RECLIN- ING CHAIR.

No. 97.

Height of Back from Seat	34 inches.
Height of Seat from floor.....	20 "
Height of Wheels.....	30 "
Width of Seat.....	19 "

Will pass through a doorway not less than 28 inches wide.

In order to meet the demand for a cheap Reclining Rolling Chair, we have introduced our No. 97, which, though not as desirable as our more expensive ones, is a strong and comfortable chair, and will answer a good purpose where a higher-priced one cannot be afforded. It can be used and fastened in any position, from upright to recumbent. Axles and wheels are the same as in No. 42, except that it has no outside hand-rim.

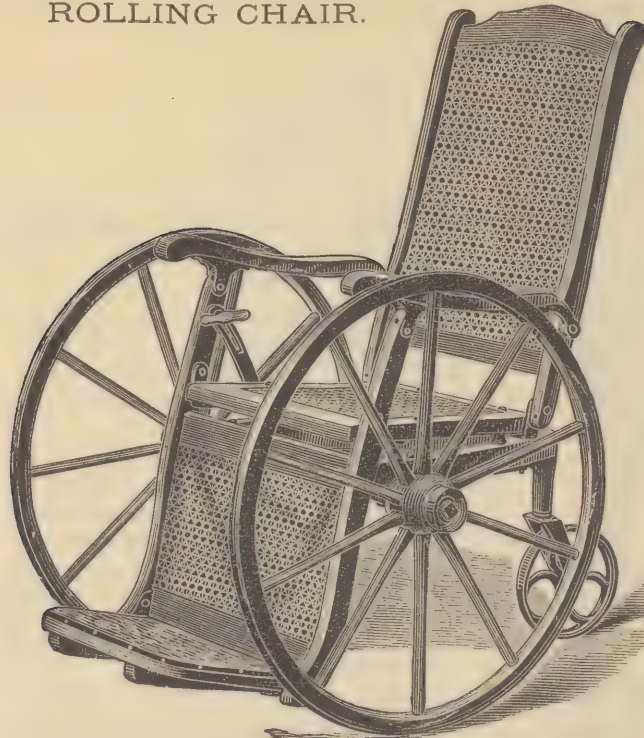

Oak, Caned..... \$25 00

Outside Hand Rim added at additional cost of \$2 00.

CHILD'S INVALID RECLINING ROLLING CHAIR.

28

Is a chair of the same proportion and dimensions as No. 48, of Rattan body, of finer quality with caned seat and leg rest.

Price, with outside rim, . . . \$30 00

INVALID'S ROLLING CHAIR. No. 98.

Has caned Seat, a well braced Frame, wide Arms, back Handle to push with, and is strong enough for a person of 250 lbs. The back and arms are made of fine, prepared rattan, plaited closely in three strands wide, leaving no ridges objectionable to the delicately sensitive, and making a flexible yet strong support for the back.

The Chair has a Foot-rest which is adjustable to any angle, and lengthens to accommodate any sized person when adjusted at any inclination, and catches automatically when raised, and is released by drawing a cord.

" Front Wheels.....	14 "	Width of Seat.....	18 "
Distance from front of Seat to front of foot box, 25 inches.			

Will pass through a doorway not less than twenty-eight inches wide.

This chair is designed for pushing by an attendant. The body is the same as that used on our No. 18 Chair, placed on springs, and has a detachable push handle. The foot box is long and roomy, making it very comfortable for different sized persons. The chair is nicely balanced, so that the front wheels are easily lifted from the ground in order to pass over gutters or obstructions. With two-inch tires on the wheels, which can be furnished at an additional cost of \$2.00, it makes a very desirable chair for use on the sand at seaside resorts.

No. 29.

BATH ROLLING CHAIR.

No. 57.

Height of Back from Seat.....	23 inches.
Height of Seat from foot board..	20 "
Height of Wheels.....	30 "
Width of Seat	20 "

Will pass through a doorway not less than 28 inches wide.

This Rolling Chair is intended for an attendant to propel, for which purpose a handle is strongly attached to the back. It is placed on springs, thus making it easy riding, and very desirable for use out of doors. The chair is made in the most approved shape for securing the comfort of the occupant, having back and sides caned and arm rests. The wheels do not have the outside hand rim, otherwise are the same as those used on No. 42. Axle is iron. The front wheels are iron, 10 inches in diameter, and, working on a pivot, allow the chair to be easily turned.

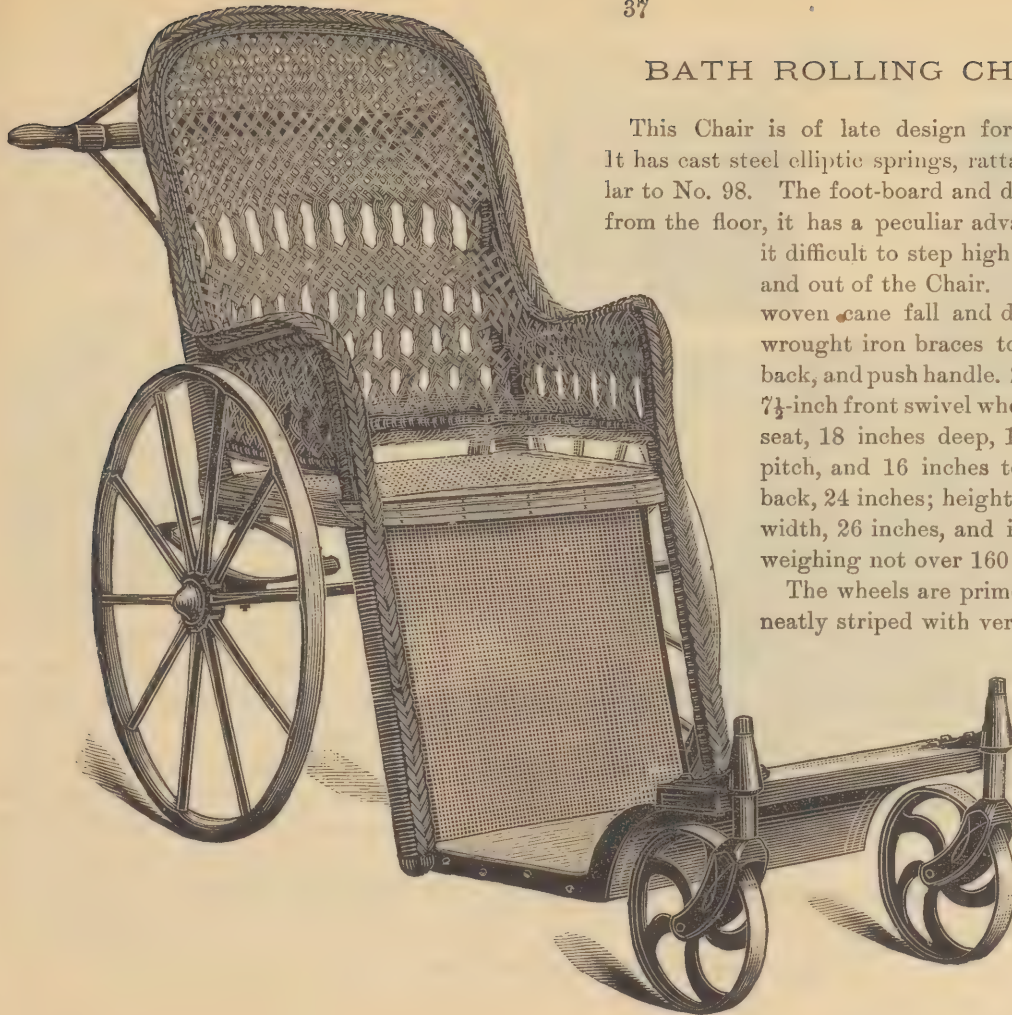

Price..... \$40.

BATH ROLLING CHAIR, No. 99.

This Chair is of late design for secondary propulsion. It has cast steel elliptic springs, rattan back and arms, similar to No. 98. The foot-board and dash being but 3 inches from the floor, it has a peculiar advantage for such as find it difficult to step high or need to be lifted in and out of the Chair. The seat is caned, with woven cane fall and dash; rigid frame with wrought iron braces to foot-rest, dash-board, back, and push handle. 24-inch rear side wheels, 7½-inch front swivel wheels, *rubber tired*; size of seat, 18 inches deep, 17½ inches wide, 2-inch pitch, and 16 inches to foot-board; height of back, 24 inches; height of arms, 9 inches; total width, 26 inches, and is designed for persons weighing not over 160 pounds.

The wheels are primed and painted brown, neatly striped with vermilion.

Price, \$43.00.

SARGENT'S CARRYING CHAIR.

THE features of this chair are, that its occupant can be comfortably carried up and down stairs, or be pushed about the house from room to room, without detracting from its merits as an ordinary sitting chair.

By reference to the engraving, it will be seen that the legs of the chair are morticed into a platform which is provided with double roller anti-friction casters. The platform is constructed with a sliding foot-rest, and adjustable lifting rods. At the back of the chair is a handle designed for both lifting and pushing. Thus it will be seen that the occupant of the chair may be pushed from room to room, taken up or down stairs in a most comfortable manner. The rods being adjustable, the chair can be easily managed up or down narrow or winding stairs.

With the Foot-rest and the Lifting rods pushed in, the chair has no objectionable features for the sitting-room or the parlor. It can be trimmed very attractively, and

with cushions it forms one of the handsomest as well as one of the most comfortable chairs that can be found.

Price.....\$25 00

(For price of cushions see List.)

SARGENT'S FOLDING CARRYING CHAIR.

The accompanying cuts clearly illustrate the purpose of, and the principle on which this chair is constructed.

Fig. 1 shows how compactly it can be folded, which is a great consideration when traveling. Fig. 2 represents the bars adjusted for carrying up or down stairs, and Fig. 3 for carrying on a level.

It is the lightest chair that can be made, and be sufficiently strong to avoid any risk to the occupant.

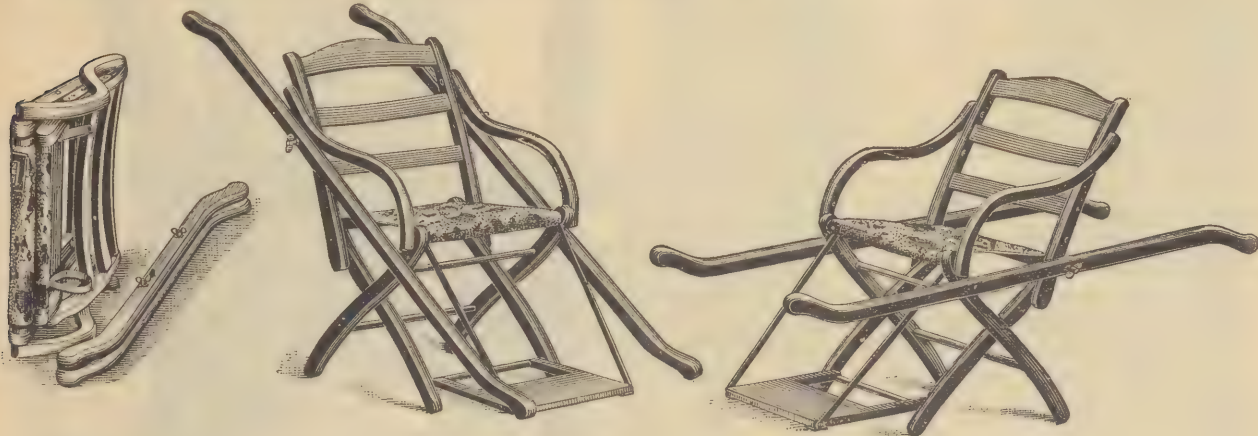

Fig. 1.

Fig. 2.

Fig. 3.

The frame is made entirely of oak, and strongly riveted, with a seat of carpet. When the carrying bars are detached, and the foot rest (which is suspended by leather straps) is folded back, it is in no way impaired for ordinary use.

The bars are detached or changed to carry inclined or level, by the removal or adjustment of the thumb screws which project through the bars into metallic fixtures in the sides of back rails. When the bars are removed they fasten together by the same fixtures:

It weighs but 17 lbs. The length as adjusted in Fig 2 is 46 inches. Width between the arms, 17 inches. Width to outsides of carrying bars, 19 inches. Height of seat from floor, 17 inches.

Price, - - - - - \$10.00.

THE HEALTH JOLTING CHAIR.

The occupant by working the lever handles backward and forward produces, as nearly as is possible artificially, the same movement that is experienced in horseback riding. This operation strengthens the arms, expands the chest, develops the lungs, and at the same time the jolting motion exercises all the important internal organs.

The effect of this combined external and internal exercise acts directly on all disorders arising from sedentary habits, for which it is both a preventive and a cure. It will be found especially beneficial to all such as suffer from constipation, dyspepsia, the effects of torpid liver and kidneys, nervous prostration, melancholia, loss of appetite, rheumatism, gout, general debility, etc.

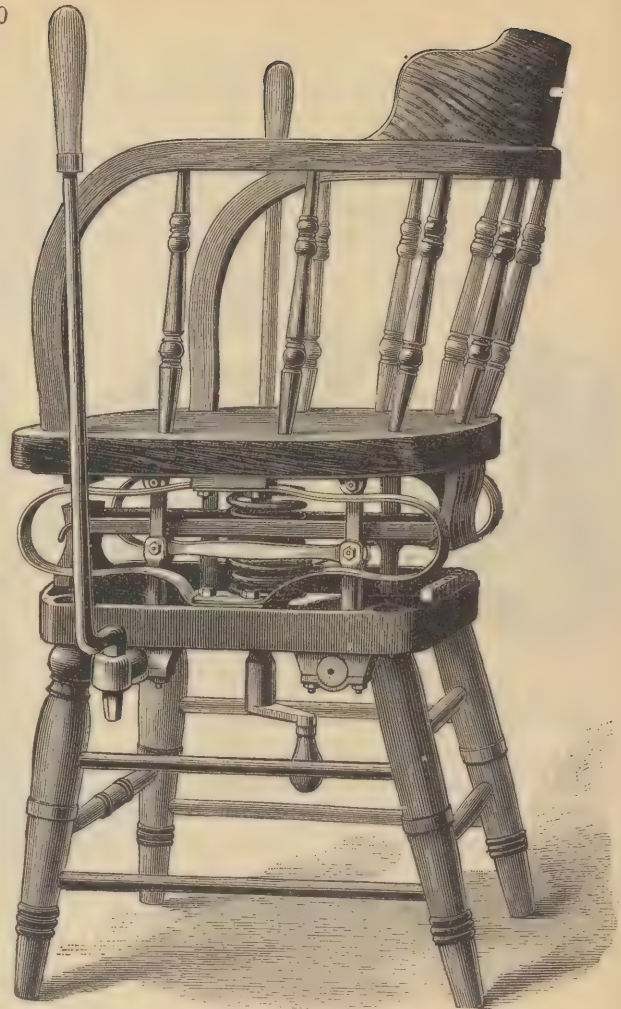

It is an equalizer and gentle stimulator of the circulation and gives a healthy tone generally to the body.

It is a brain refresher to those engaged in mental, literary or clerical work, and is a great remedy for the tired voice of public speakers and singers. Unlike drugs, it creates instead of impairs vital force.

The exercise may be graduated from very gentle to violent, and where the patient is unable to work the handles, the jolting exercise may be administered by an attendant.

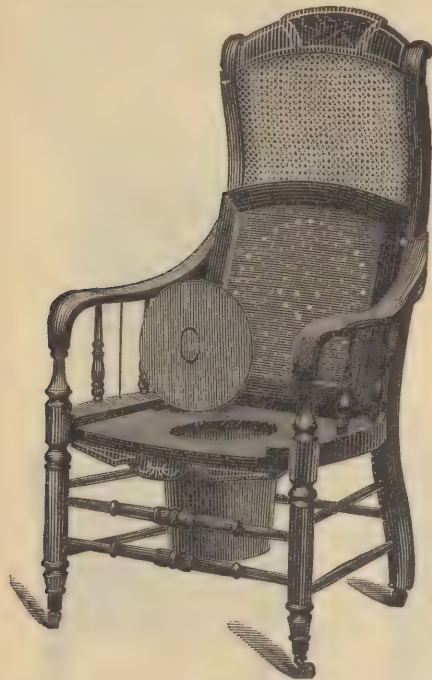

Incontestable testimony as to its value from those who have been benefited by its use we can furnish from prominent physicians, clergymen, lawyers, editors, and ladies and gentlemen in private life.

Price, \$25.00.

SANITARY COMMODE CHAIRS.

These chairs are made in accordance with the best known principles of sanitary science, and are constructed with the view of obtaining the greatest possible comfort for the occupant; having high, caned backs, shaped to give support to the head.

No. 7.

Showing arrangement of seat, etc.

No. 7.

As an ordinary arm-chair with pail removed.

No. 8.

With seat down and pail in place.

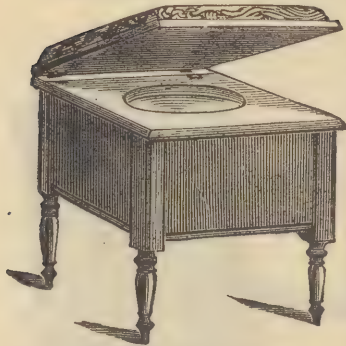

The chair has a double seat; the pail is of galvanized iron with a bail and a tight cover. With the pail removed they present no objectionable feature to be utilized as a comfortable easy chair in any room. For hospital use this chair is especially desirable.

No. 7. Black Walnut, Caned, \$18.00.

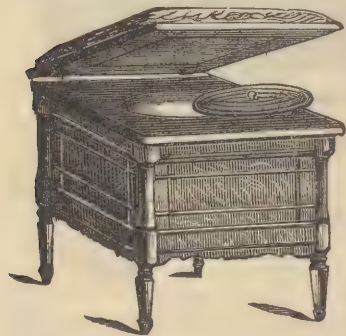

No. 8. Ash, Caned, \$12.00.

SARGENT'S SANITARY COMMODES.

ORDINARY COMMODES.

No. 1. Black Walnut, Brussels Carpet Top, with 11 inch porcelain pan. \$4 65
No. 2. Same style, 12 in. pan. 5.50

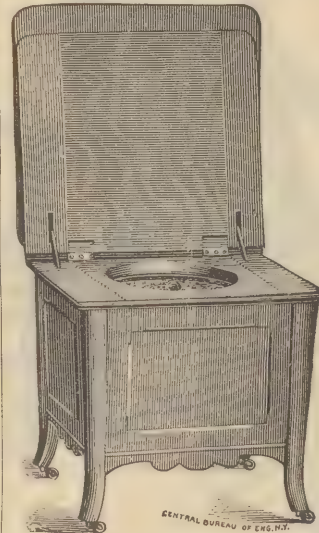

No. 3. Full size, Velvet Carpet Top. \$8.50
No. 4. Similar, but handsomer, on Castors, with drawers for paper. \$10.00

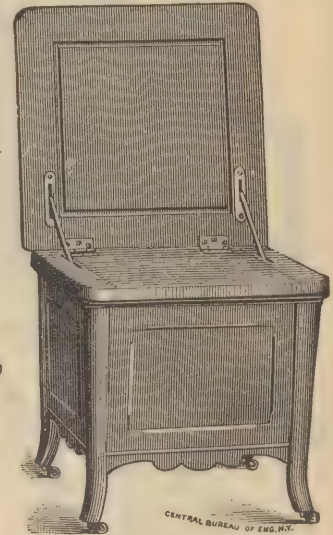

Until recently, public attention has not been drawn to any great extent to the important question of Sanitary Science, especially as applied to the household. There are, however, no more vital questions than those on which health is dependent, and there is no one article, the intelligent selection of which bears more practically on the subject than the Commode. Previous to the introduction of our Sanitary Commodes, all attempts in this direction have been defective, but in these we have introduced new features which render them absolutely odorless, and free from the objections of their predecessors. We have also added to them additional value, by adopting designs which are not offensive to good taste, and have made them in a style the least possible suggestive of the purpose for which they are intended. The following are the points of superiority embodied in the construction:

The pail which is of such shape as to give all advantages of the modern water closet, is made of spun iron, coated with a smooth agate enamel, which is at once cleanly and indestructible. The pail which has a

(Continued on next page.)

CENTRAL BUREAU OF ENG. N.Y.

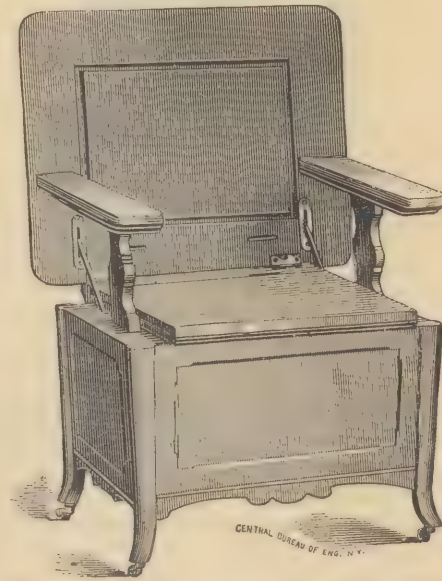

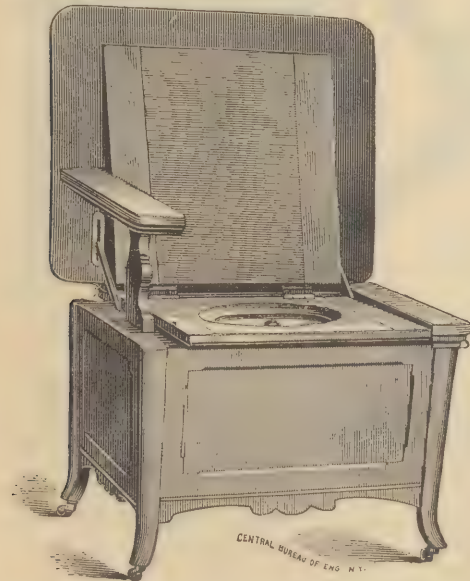

CENTRAL BUREAU OF ENG. N.Y.

No. 5.—Height of seat from floor, $17\frac{1}{2}$ inches; size of seat, $17\frac{1}{2} \times 17\frac{1}{2}$.

“ “ Mahogany.	20.00

SARGENT'S SANITARY COMMODES.

cover of the same material, is also provided with an intermediate cover of flexible rubber, which makes the escape of any odor impossible. The Commodes have a triple cover, the top one forming when raised a substantial back, which locks automatically, the intermediate cover forms when not raised, a plain seat, giving all the advantages of a chair, as well as a cover for the hole; the lower cover is cut with a hole, and is only raised for removing the pail. Both numbers, 5 and 6, have the same sanitary arrangements, and are alike in construction, excepting the arms. No. 6 has arms which are arranged so as to be raised independently of each other, the object of which is to enable a sick person to be removed from a bed to the Commode without obstruction; after being seated, the arms may be raised for the support, or depressed for the removal of the patient. The arms, as well as the back are self-locking, making the Commode, aside from its merit as such, desirable as a comfortable arm-chair, and especially valuable for country residences where water facilities are lacking. The Commodes are made and finished in the best manner with tops handsomely veneered, and are set on casters. The mechanical fittings are nickel plated.

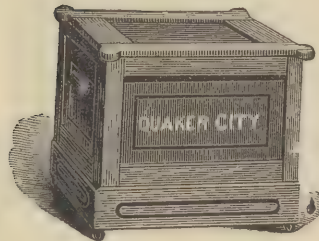

No. 6.—Height of seat from floor, $17\frac{1}{2}$ inches; width of seat with arms down, 24 inches; depth of seat, 19 inches; size of arms, $19\frac{1}{2} \times 3\frac{1}{4}$ inches; height of arm when raised, 8 inches.

PRICE, in Black Walnut, Ash or Cherry.....\$20.00
 “ “ Mahogany 25.00

QUAKER CITY COMMODE.

No. 9, Fig. 1.

No. 9, Fig. 2.

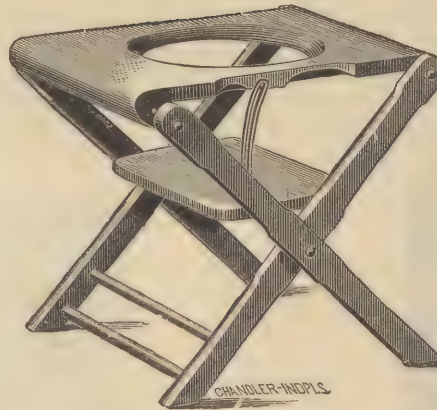

When the lid is lifted, as in Fig. 1, the arms are raised with it and locked by the moving of a slide, forming a substantial support for the back and arms. One movement opens or closes it.

The pan is of earthenware, flanged at the rim sufficiently to protect the wood-work from becoming fouled. On the underside of the earthenware cover is cemented a rubber band, which has the double effect of making it noiseless and preventing the odor from escaping.

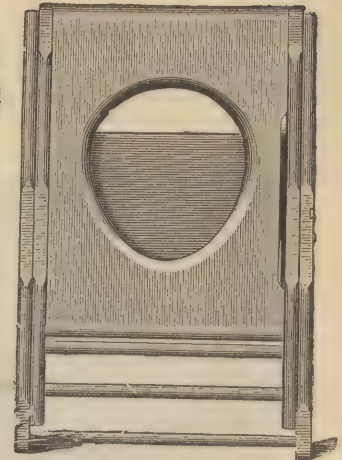

Size of seat between arms, $17 \times 17\frac{1}{2}$ inches; height of seat, $17\frac{1}{2}$ inches; weight, 40 lbs. Mounted on casters.

Price in Black Walnut or Cherry, \$10.00

FOLDING COMMODE.

No. 10, (OPEN.) Fig. 3.

No. 10, (FOLDED.) Fig. 4.

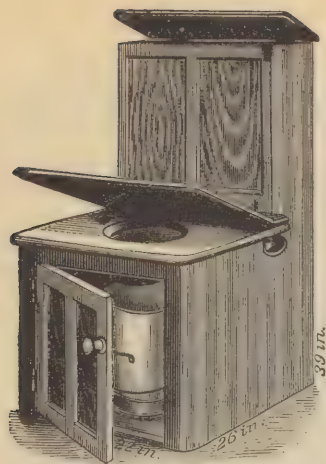

The Folding Commode is an article which cannot fail to be appreciated by any one accustomed to traveling, and who knows from experience the lack of good sanitary conveniences to be found under such circumstances.

They are finely made of Black Walnut and Ash, and arranged to utilize any ordinary vessel.

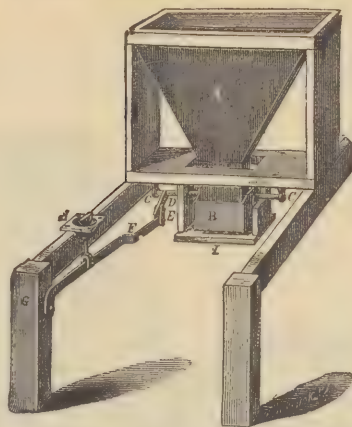

Fig. 1 represents it open, Fig. 2, folded. It is 24 inches long, 15 inches wide, $1\frac{3}{4}$ inches thick when folded. It weighs seven pounds.

Price, \$3.50.

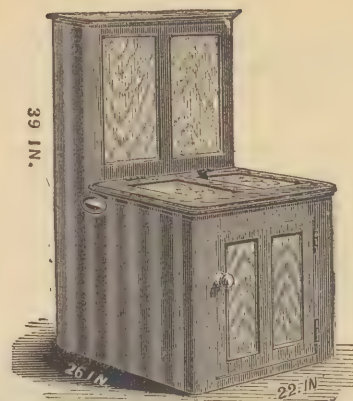

THE MOULE EARTH CLOSET.

Showing the door open for removing pail. The flap of the seat and earth reservoir are also partially raised to show the construction.

Showing the apparatus mounted on bearers as when fixed. Seat removed, showing mechanical arrangement.

Showing Cabinet complete. Each closet is complete in itself, having a heavy galvanized pail and a porcelain shield surrounding the under side of the seat.

An earth closet is a cabinet with a mechanical contrivance to conveniently cover excrement with earth or some substitute. This covering at once *suppresses all odor and gradually absorbs and neutralizes the matter itself*. Dry earth, coal ashes, charcoal dust, peat, and lime are excellent absorbents and deodorizers. The Moule Earth Closet is the best known and by far the most satisfactory. The pail needs to be emptied about once a week, or when full, and the reservoir to be filled when empty—once in two or four weeks perhaps. It is three feet high, two feet wide, and two feet seven inches deep. The directions, which are very simple, are posted under the lid of every closet.

"The privy stands, perhaps, at the bottom of the garden fifty yards from the house, approached by a walk exposed to the public gaze, bordered by grass, wet except during the sunny part of the day, overhung by shrubbery and vines, which are often wet. In winter snow drifts block the way, and during rain there is no shelter from any side; the house itself is fearfully cold, if not drifted half full of snow or flooded with rain. A woman who is comfortably housed during stormy weather will postpone the exposure that such circumstances require. I pass over now the barbarous foulness and odor—it is only as an unavoidable evil that these have been tolerated—but I cannot too strongly urge attention to the point taken above, and insist on the fact, that every consideration of humanity, and of the public welfare, demand a speedy reform of this abuse. The water closet has reformed in the city, the earth closet must reform it in the country."—*Geo. E. Waring, C. E.*

"Nothing can be more effectual, and its use has every sanitary advantage."—*Prof. S. W. Johnson, Yale College, New Haven, Conn.*

"Entire Satisfaction."—*Prof. A. B. Palmer, Med. Dep. Mich. University.*

"Two years' use has made it indispensable in my house."—*James A. Dupee, Boston.*

"It not only works well, but it is easily taken care of."—*Rev. E. Dewhurst, Hinsdale, N. H.*

"Has given entire satisfaction in my Kindergarten."—*Mrs. A. B. Knox, Worcester, Mass.*

"I want several more for my country house."—*E. Delafield Smith, late Corporation Counsel, New York.*

"It has been a great convenience to my children day and night, during the severe winter especially."—*W. G. Craigen, M. D., Emporium, Pa.*

"In use two years or more, has never been out of repair. The ladies would part with any piece of furniture in the house rather than with the earth closet."—*J. S. Whillock, Mattewan, N. J.*

"We could not think of doing without it."—*Rev. A. McElroy Wyllie, Nyack, N. Y.*

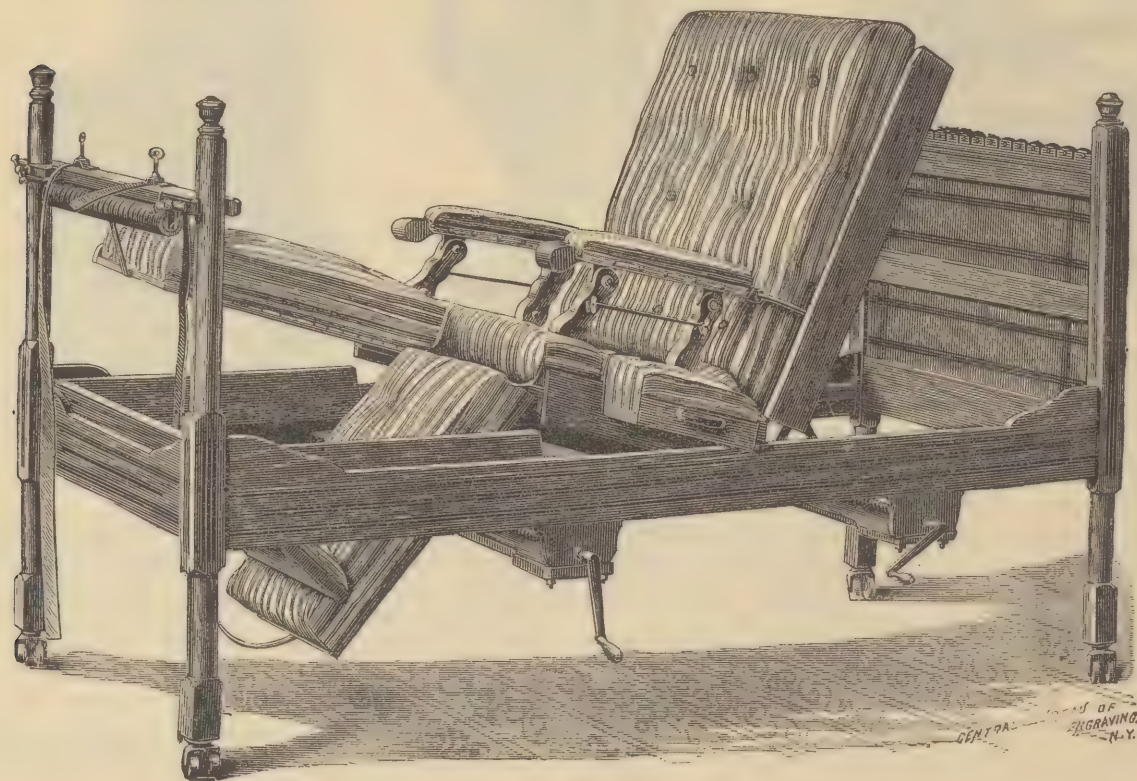

"Extremely handy: would not take \$100 for it."—*A. H. Buckingham, State Street, New Haven, Conn.*

"We use it in our sleeping rooms and find not the slightest offense."—*G. T. Dickerson, Westport, Conn.*

Price, in Walnut or Ash Cabinet, \$35.00.

SARGENT'S INVALIDS' AND FRACTURE BED.

SARGENT'S INVALIDS' AND FRACTURE BED.

For the comfort of invalids suffering from any cause, that necessitates a continued confinement in bed, or for fractures this bed is unrivalled. It is constructed with joints to correspond with those of the human body, so that whatever position it is necessary for the body to assume, all that is desired is quickly and easily accomplished.

To facilitate a correct understanding, the Modus Operandi of changing it from an ordinary bed to any desired position, the following is an explanation of the principle. Beneath the back and the knee joints where in the illustration the cranks are shown, there are screws with a right and left thread, which extends from one rail to the other; on these screws are travelling nuts to which are rivetted toggle bars, which connect with the under sides of the back, and knee joints respectively; thus as the cranks are turned, the bars are drawn together, and the back, or the knees must necessarily be raised. This principle is the simplest that can be devised, it is positive, strong and noiseless; and by the simple turning of the crank, a patient of any weight, can with little effort be placed in any position desired by a single attendant, as quickly as is necessary, or so gently that the change of position is scarcely perceptible.

The leg section is divided, and each part is provided with a foot rest, which is adjustable to the size or convenience of the patient. In fracture cases this is very desirable, it being unnecessary to fetter the uninjured leg, while it is essential to have the other held in a certain position. The bed is especially adapted to the purpose of counter extension, as either or both legs below the knee can be held at an elevated position in a line of continuity with the seat; for this purpose, the adjustable bar between the foot posts is provided with a weight roller. This bar also furnishes the support for the leg rests when they are elevated to any position above the level, by connecting straps. When the leg rests are level, they rest on a bar beneath, and as the leg rests are dropped below the level, the bar is moved backward, according to the inclination desired; thus when the leg rests are dropped down to a right angle with the seat, the back raised, and the arms attached, the bed becomes a perfect arm chair. The arms are set in from the edge of the bed, giving the width between them, that of an ordinary arm chair. The arms work with the back as it is raised, and they can be taken off at pleasure.

The sanitary arrangements of the bed are most perfect. The seat is upholstered with two pads which meet in the centre, and draw out from the sides. Beneath the pads is a galvanized iron vessel, which is placed in position or removed without disturbing the patient, and the drawing out of the pads causes no pain or discomfort.

The frames are made of black walnut, nicely finished, and are of tasteful design. Nothing but the best white hair is used in upholstering. The beds are mounted on anti-friction castors, so that they can be easily moved around the room with the occupant. The beds are constructed with a view of compact and easy transportation, and also of being easily understood and quickly set up. The size is 6 feet 10 inches by 3 feet.

THE CROSBY INVALID BED.

This Bedstead is designed to give comfort and ease to those patients so exhausted from disease that they are obliged to be lifted from one bed to another to have it made up; also to prevent bed-sores, and cure those already existing. In all cases of Fractures, Dysentery, Acute Rheumatism, the last stages of Consumption and Typhoid Fever, attended with great prostration and involuntary discharges, it affords every access to the body—permitting the bed-clothes to be changed, the bed made up, securing perfect cleanliness, without fatigue or annoyance, and allowing defecation to be performed without moving the patient. It is also especially adapted for use in cases of Child-bed. One person can perform all the necessary duties to a sick person, make up the bed, wash and ventilate the body, dress bed sores, and use the bed-pan, without assistance or disturbing the patient.

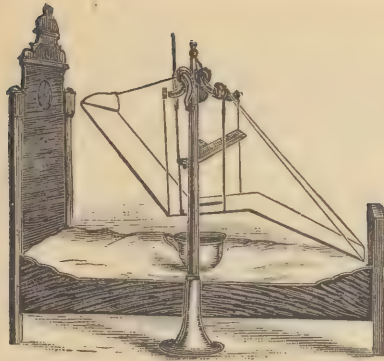

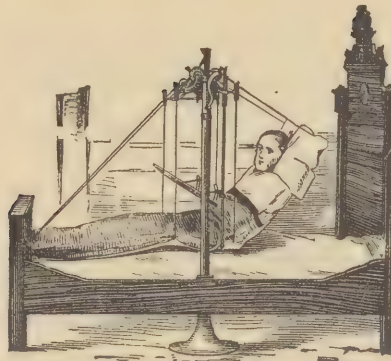

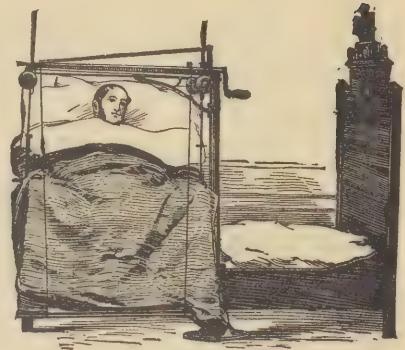

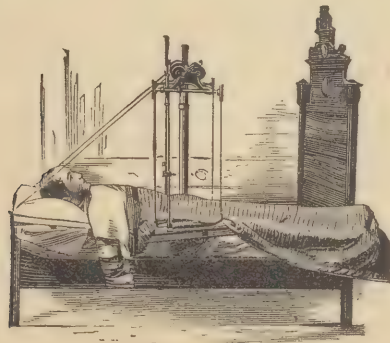

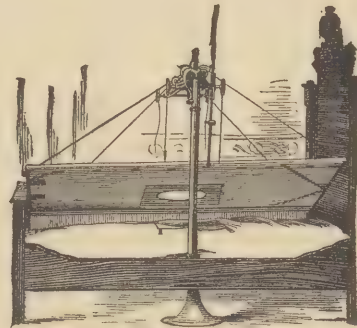

It is simple in construction, and not liable to get out of repair. A child twelve years old can manage it. Hundreds of them in use, and in no instance have they failed to give satisfaction.

DIRECTIONS FOR USING.—First make up the trundle-bed and push it under the bedstead, so that the hooks will take hold of the catches. Then, by turning the crank, which winds up the straps, the bed is readily raised to its position, taking the weight of the patient from the bands, which become loose. The bands are to be adjusted by the pins, through loops made in the same, to give equal pressure on all parts of the body when the bed is lowered; and when the patient is on the mattress the bands should be so loose as to give him the entire elasticity of the bed.

PRICE.—Complete, including Bedstead, Hair Mattress, Woven Wire Mattress, Head-Rest and Adjustable Table, . . . \$60 00
Discount for parts not required.—Hair Mattress, \$13.00; Woven Wire Mattress, \$5.00; Head-Rest, \$6.00; Adjustable Desk, \$6.00.

GOODWIN'S INVALID MANIPULATOR.

*Fig. 1.**Fig. 2.**Fig. 3.**Fig. 4.**Fig. 5.*

GOODWIN'S INVALID MANIPULATOR.

In this admirable device the inventor seems to have thought of and provided for every conceivable aid and comfort in the handling of wholly or partially helpless invalids, within the range of possibility.

It can be used in connection with any ordinary bedstead, it is simple in its construction, easily managed, durable, not in any way liable to get out of order, and can be set up or removed in a very few minutes.

To the patient it affords every facility for perfect rest, and to the attendant it does away with very much exhausting and exacting labor, and in a much more satisfactory way, both to the patient and attendant. It requires but one person to handle in every way that can be needed the heaviest invalid, and without the necessity of so much as laying a hand on him.

Although it is a recent invention, and quite different from any previous device, it has been thoroughly tested in a large number of cases of the most exacting and varied kinds, always eliciting strong commendation, alike from the invalids and their physicians and nurses.

The cuts on the preceding page, together with the following description, will convey a fair idea of its construction and *modus operandi*, although it should be seen to be fully appreciated.

A piece of duck, or canvas covering, and held sufficiently taut by a jointed iron frame, (with or without a puff or thin mattress upon it,) is laid upon the bed, and the patient lies down, or is placed upon it. Then one end of the iron standard is inserted into the base, which is screwed securely to the floor at the side of the bed. On the top of the standard is placed an arm or crane, which stretches across the bed. To this, three rods with small pulleys, and a worm gear, are affixed, and connected at pleasure by cords to the frame around the canvas.

Turn one of these rods with a crank, and the head of the patient is raised to any desired position as in Fig. 2, and held at any point by a cog wheel. By turning another of the rods with the same crank the whole body is raised as in Fig. 1, to any height required, so gently that he is scarcely conscious of being moved at all, and by the third rod the feet and legs are lowered, bending naturally at the knees, or they may be kept all the while in a horizontal position if required, as in cases of fracture, etc.

When raised to a proper height above the bed an apron let down discloses an opening in the center of the canvas, and also one in the mattress and sheet, and it becomes a sick or commodore chair as in Fig. 1, by which a usually very difficult office is performed, naturally to the patient, with neatness, and without taxing anybody's strength or causing the least discomfort to the patient.

When the patient is raised a little, a few turns of the crank will elevate the feet to a level above the foot board of the bedstead, and the patient may be swung around by a gentle motion so as to face towards any part of the room, as in Fig. 3, or so as to be parallel with the bed, as in Fig. 4, and entirely off from it, thus allowing the mattress and bed clothes to be turned, changed, or taken out of doors to be sunned or aired, the patient remaining meanwhile, for hours if desired, as comfortable as if still on the bed or in an easy chair.

A movable table, adjustable to any height or at any angle, may be placed before the patient, as in Figs. 1 and 2, at any time, conveniently for eating, reading or writing.

If the patient needs to be turned on the side for relief or to avoid bed sores, slip a little coupling on the center rod, and either side can be raised without raising the other, thus turning him on either side by a gentle and equal pressure all along the whole body, (see Fig. 5,) and when thus lying on either side, one-half of the under sheet can be folded along the side of the body, so that when he is turned to the other side, or on the back, the whole of it will come out on the opposite side, and a clean one can be put under him in the same way.

Lack of space prevents us from inserting testimonials, of which we have a goodly number, both from physicians and private individuals who have used the Manipulator to their entire satisfaction.

"SARGENT'S" SOLID COMFORT BACK RESTS.

The "Solid Comfort" Back rest is a convenience which one having once enjoyed would never think it possible to do without. The possession of one is an insurance against much of the discomfort of even a temporary illness, while to such as are compelled to endure a prolonged siege of sickness or to invalids who have to spend much of their time in bed, it is simply indispensable.

To the attendants in the sick room it does away with much arduous as well as unnecessary labor.

In the construction of the Solid Comfort Back Rest, everything conducive to the comfort of the sick has been considered. It is made of a stout ash frame, with ratchets underneath the back, which support the patient at any inclination, and the back, unlike any others hitherto constructed, has no cross rail at the bottom, but being tastefully covered with a stout linen duck, is cool and elastic to the back.

It can be used with or without a pillow, or can be placed under the mattress if preferred.

Fig. 1.

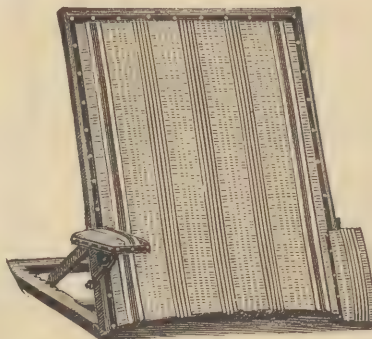

Fig. 2.

Fig. 3.

It will be seen by the accompanying illustrations that we make them in a variety of styles. Fig. 1 represents simply a plain back rest. Fig. 2, with the addition arms. Fig. 3, with the addition of arms, head rests, and an apron. The arms are so arranged that they can be always level regardless of the inclination of the back, and they fold down flat if not wanted. The advantage of the apron is, that when sitting on it, the weight of the user holds the back rest in place. Arranged with the apron, the back rest is an excellent thing for the beach or lawn, and is very popular as such.

The head rests are designed for the use of such as are unable to support themselves in a sitting position, and will be found useful when it is desirable to sleep with the back in an upright or partially reclined position.

A very useful accompaniment to the Back rests will be found in the Folding Bed Tray described in the following page :

Note. All the styles have the Apron as shown in Fig. 3.

SARGENT'S PATENT FOLDING BED TRAY.

Our Folding Bed Tray is an article of incalculable value to every household, hospital or hotel. To appreciate it one need not be a confirmed invalid, for even in a case of temporary indisposition, or where one has occasionally to take a meal in bed, the comfort derived from its use far exceeds the trifling consideration of its cost. But to those subjected to a prolonged sickness or to the invalid, the Folding Bed Tray is a boon of priceless value. It should form a part of the furniture of every household as much as a dining table. No family can be so exempt from the ills of life as not to find it a convenience at least occasionally. Our Folding Trays are made of Black Walnut, and are finely finished. They are constructed with a rim around the sides and back, and a narrow strip in front to keep the dishes from slipping. The rim and strip are built up of veneers and bent around

the corners, which is the strongest as well as the lightest way they can possibly be made. The legs are made to fold and lock automatically, when they are either folded or unfolded. The folding legs are much stronger than the old fashioned permanent ones, as well as being handsomer and lighter, and also having the decided advantage of greater portability.

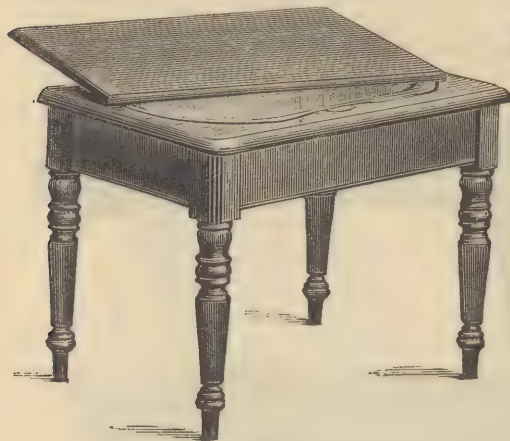

With the Folding Tray used in connection with our Solid Comfort Back Rest described on the preceding page, and illustrated in the above engraving, a person can partake of a meal as comfortably as though sitting at a dinner table.

BIDETS.

Our Bidets are all thoroughly made, of the best selected stock, and finished in the best manner in hard oil finish. They are of the most convenient and approved designs and warranted in every particular.

They are made both with stationary and detachable legs; the latter take off by unscrewing. The detachable legs are of advantage in traveling, as they can be easily packed in a trunk. There is also less risk of breakage in shipping, as well as less expense.

ARTICLES FOR THE SICK ROOM AND NURSERY.

The Triple-Forced Flame Lamp, WITH FLAME REGULATOR.

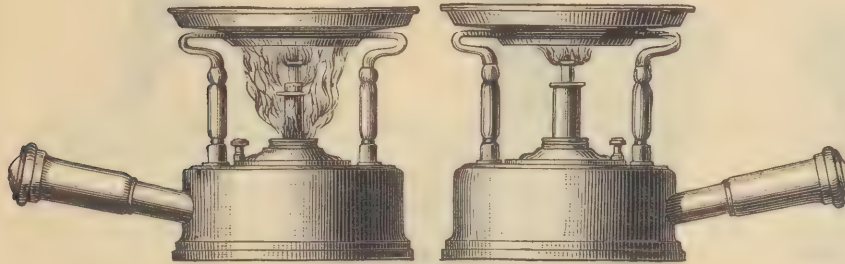

Fig. 1.

Fig. 2.

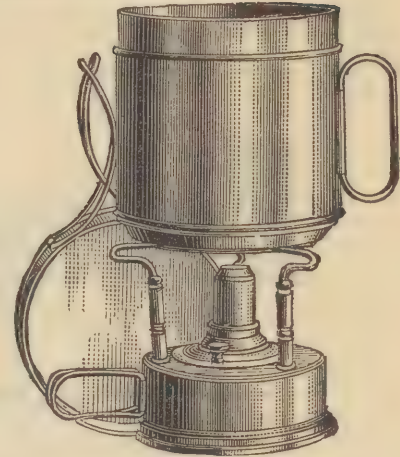

Fig. 3.

Figs. 1 and 2 represent the maximum and minimum of flame that may be attained. It gives a flame of intense heat, sufficient to boil a quart of water in five minutes; or, by using the Regulator, will yield a flame of any size, down to the smallest that can be required for simply keeping a vessel warm, and this with the least possible consumption of alcohol.

Directions for filling: Unscrew the brass cap, take out the wick-tube and pour in the alcohol, then replace the wick-tube.

To light the lamp: Apply a match to the edge of the outer (and only visible) wick; in a few seconds the upper burners will take light, and give the full triple flame.

To reduce the flame, turn the small brass knob of the Regulator from *right to left*; to increase the flame, turn from *left to right*. When the Lamp is not in use the brass cap should always be screwed on in its place, to prevent evaporation of the alcohol.

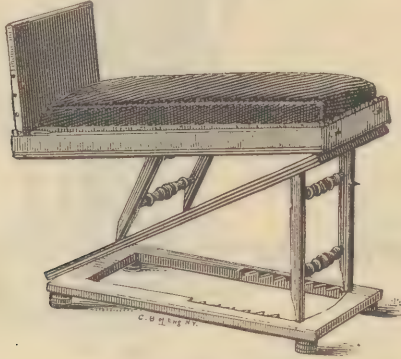

Prices of Figs. 1 and 2, Tin, \$1.50; Polished Brass, \$3.00; Polished Copper, \$3.00.

Fig. 3 represents the same Lamp, but with attachments, and arranged especially for traveling. It is provided with a copper tin-lined pail, the cover of which may be used as a fry pan. The handles of both the pail and cover, as well as those of the Lamp, fold, so that when packed it is compressed into a diameter of $5\frac{1}{2}$ in. x 5 in. deep. This style is made only in the best quality.

Price, complete, \$6.50

SARGENT'S ADJUSTABLE LEG REST.

This Leg Rest is adjustable to the height of the seat of any chair, or at any inclination. The foot rest folds beneath the upholstery, if not wanted. The Leg Rest when folded also serves all the purposes of an ottoman. It is a desirable piece of furniture in any household, for general use, and is

AS A LEG REST.

especially valuable in cases of fracture, dropsy, or gout, when it is necessary to keep the leg in a certain position. It is easily and quickly adjusted and adapted to use with any chair. The frame is of Black Walnut, and nicely finished and upholstered. The foot rest is carpeted. Size, 17x24 in.

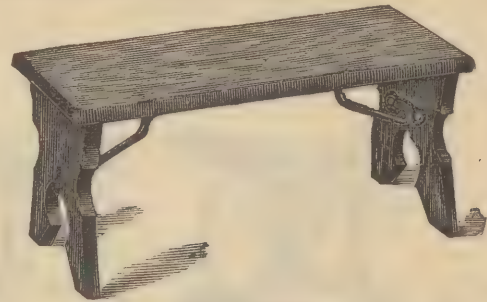

AS AN OTTOMAN.

THE "OPERA" FOLDING FOOT BENCH.

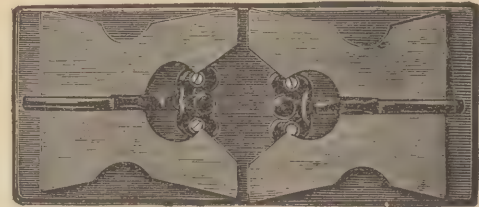

It is only necessary for a lady to know that such a thing can be procured for her to wish to possess one.

No. 1. OPEN.

It is one of those inexpensive little trifles, the want of which far exceeds its worth. They are very useful in travelling, at church, and places of amusement, as well as at home.

A gentleman accompanying a lady to the theatre can easily put one in his pocket.

No. 2, FOLDED.

They are of unique design, beautifully made of black w.a. aut. and nicely finished. The brace which sustains the legs when unfolded, keeps them in place when folded. They fold up into an inch thickness, weigh scarcely anything, and will sustain nearly a ton's weight. The size is 5 x 11 inches.

SARGENT'S TABLE UNIVERSELLE. No. 72.

Since its introduction, our Table Universelle has steadily grown in popularity, as its merits have become known and appreciated. It is difficult to conceive of any single piece of furniture combining a greater number of points of excellence. The accompanying illustration demonstrates one of the many phases of its adaptability to study. It is equally good for reading or writing while in bed, reclining on the lounge, or standing. To students and professional people who have occasion to handle heavy books, it greatly facilitates their labor. It is constructed with a telescopic pillar, which enables the top to be raised to any height. The pillar rests on a base which has one elongated foot, over which the top projects, thus giving it a strong counter bearing. The top is divided into two sections, one of which rests on the telescopic post and is permanently level. The other is adjustable to any degree within the limits of a circle, and turns from the center, which gives it the advantage of being used at either side of a chair, bed, or lounge. While the adjustable section is inclined, the level section may be utilized for a lamp, other books, refreshments, etc. The level section has a drawer, which is convenient for ink, writing implements, etc. Fig. 1, on the following page, shows the table adjusted for reading, and fig. 2 the same table with the adjustable section locked to a level with the permanent one in which position there is no better device known for an invalid to take meals from in bed. The table is elegant both in design and finish, and of such quality of workmanship that it will last indefinitely.

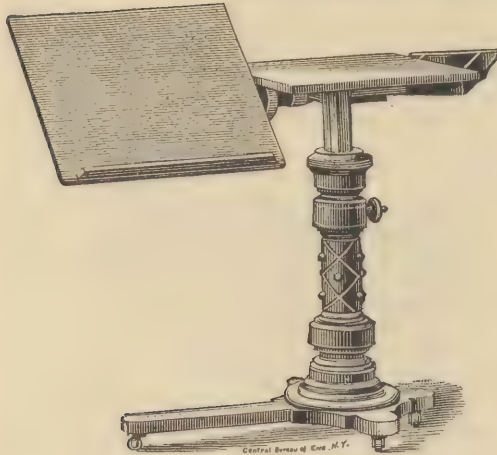

No. 73.

This, though essentially an invalid's table is a great improvement over the old-fashioned cumbersome bedside table. It has all the advantages which that has, and is at the same time a desirable as well as an ornamental table for general use.

As shown in fig. 3, the top is arranged to project over the bed for an invalid to take meals from while in bed. In fig. 4, it has been transformed into a handsome pedestal table, or stand, having no indications that it is other than that. This can be effected by simply folding over the lid and pressing back the moulding, which gives it support, and pushing in the elongated foot, which in fig. 3 is represented as drawn out to form a counter bearing for the un-

folded top. The construction of the telescopic pillar is the same as that of No. 72. The dimensions, general style, workmanship, and finish are also the same. The prices of both Nos. 72 and 73 will be found on the following page.

THE HOLLOWAY READING STAND.

Fig. 1, Style A.

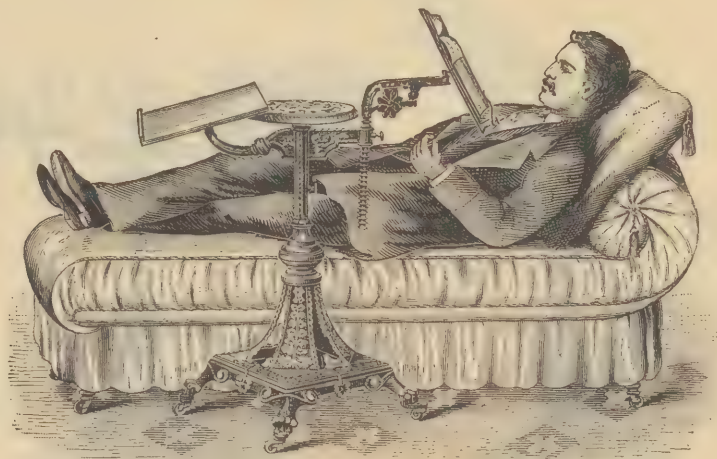

Fig. 2, Style A.

The accompanying illustrations clearly indicate the practical uses of this excellent device. We need add only a few words concerning its construction, attachments, dimensions, etc.

The Stand, with the exception of the rests, is made of iron. It is of light and artistic design, finished in smooth, black japan, and tastefully embellished with gold bronze. It is mounted on brass casters, and can be easily moved.

The Desk and Dictionary Shelf (Figs. 1, 2, and 3), the Table Board (Fig. 4), and the Book Case (Fig. 5) are of ebonized wood.

The diameter of the Stand or Lamp Holder is $10\frac{3}{4}$ in.; height from floor, 29 in.; floor surface of base, 17 x 17 in.; net weight, 27 lbs.; when packed for shipment, 45 lbs.

The Book Rest is adjustable to any angle, size, 9 x 12 in., and has a most perfect device for holding the leaves.

The Dictionary Shelf has the permanent pitch represented in Figs. 1, 2, and 3. Size, 11 x $16\frac{1}{2}$ in. The Table (Fig. 4) is for invalids' use. The bracket which supports it fits into the same socket as the one that supports the Dictionary Shelf. Size of Table, 12 x 18 in.

Price, Style A, \$13.50. Table Board Attachment, \$1.50.

THE HOLLOWAY READING STAND.

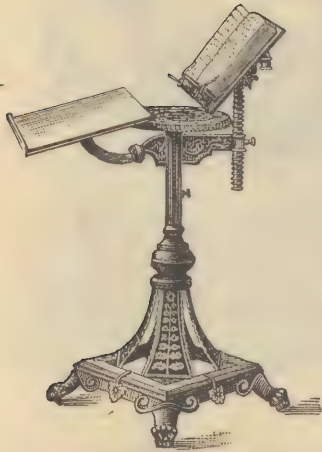

Fig. 3, Style A.

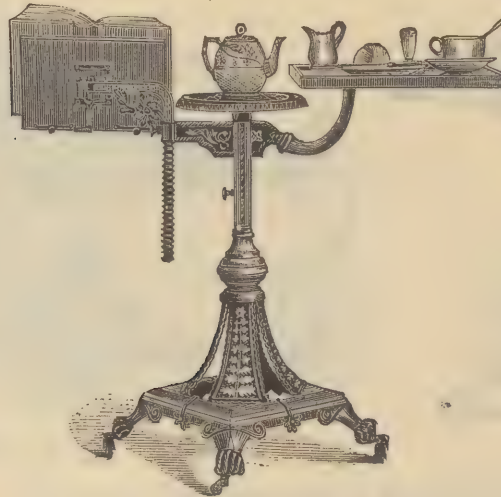

Fig. 4, Style A.

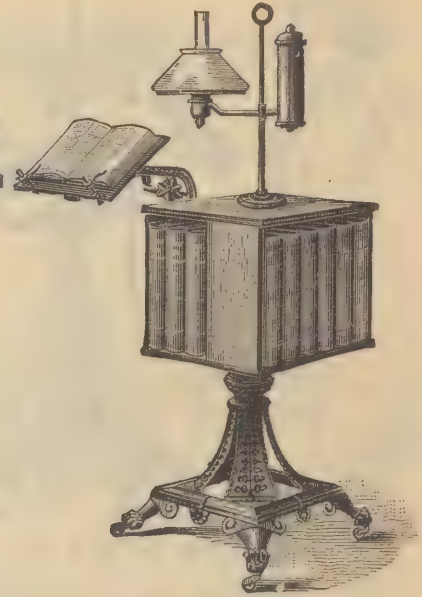

Fig. 5, Style B.

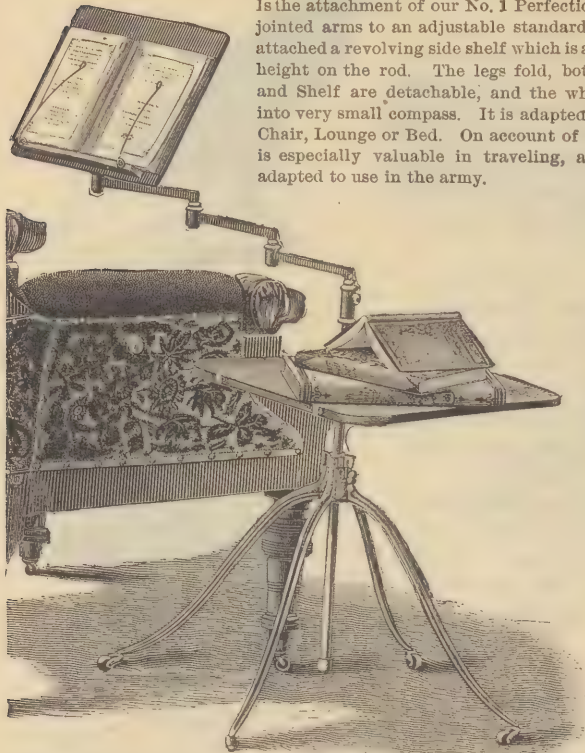

The Revolving Book Case (Fig. 5, Style B) is of ebonized wood, and will hold 17 volumes, Encyclopedia size. The top of the Case forms a convenient holder for a dictionary or lamp. The Desk for reading is the same as those of the regular Stand of Style A.

In this Reading Stand every facility is afforded to the reader for convenience and comfort. The slightest push of the hand reverses the places of the reading book and book of reference. The Desk has four distinct motions—a circular motion with the dictionary shelf, a circular motion with the bracket arm, an independent rotary and a tipping motion of its own.

The weight of the Stand is sufficient to counteract any side weight that can be used, and a lamp may be used with perfect safety.

Price, Style B, \$16.00. Table Board Attachment, . . . \$1.50.

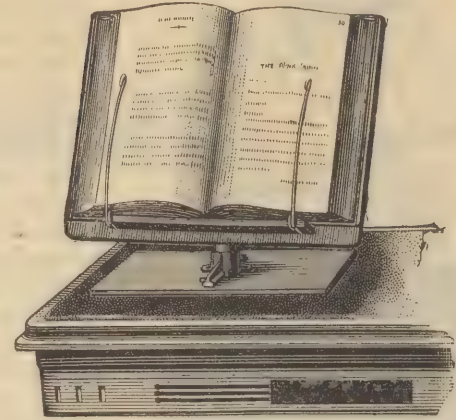

THE PERFECTION COMBINATION READING STAND

Is the attachment of our No. 1 Perfection Desk by three jointed arms to an adjustable standard. To the rod is attached a revolving side shelf which is adjustable to any height on the rod. The legs fold, both the Book-rest and Shelf are detachable, and the whole thing packs into very small compass. It is adapted to use with any Chair, Lounge or Bed. On account of its portability it is especially valuable in traveling, and is admirably adapted to use in the army.

PRICE, either with wood of Black Walnut or Cherry, or with cast-ings Bronzed or Japanned, Nickel Rod, \$7.00.

THE PERFECTION TABLE READING STAND.

The Perfection Book Rest is an adaptation of our Perfection Desk to use on a Table or Library desk. It is adjustable to any angle and is rotary. It is very useful for reading, holding books of reference, copying, etc. It is also admirably adapted in combination with our Bed Tray to invalids' use for reading in bed. Any style of the Perfection Desk or the Lambie Dictionary Holder fit into the socket of the base—so that any who have previously ordered a Desk or Holder by ordering a base may utilize those, and have a perfect Table Reading Stand.

THE CABINET REVOLVING BOOK-CASE.

It is entirely distinct in its construction, style and finish from every other case. These cases are constructed of the very best seasoned wood, and are finely oil-finished, in walnut, or cherry with mahogany finish. The guards at the ends of the shelves are of highly polished brass, of novel and modern design, and are of such a form as to admit of the easy insertion of books, and so as not to occupy any shelf space.

THREE STYLES.

No. 1 has four shelves only, which extend entirely across two sides of the case. The two lower shelves are intended to accommodate a full set of the American Cyclopaedia; the two upper shelves other miscellaneous reference books or new books, such as one likes to have within easy reach. Two sides of this case contain compartments, the upper ones being designed to hold current numbers of magazines (each being large enough to hold six numbers, or one volume) until ready for binding, or as a temporary and handy receptacle for the most recent numbers of several magazines; the lower compartments are intended for newly received pamphlets, catalogues and other unbound printed matter. The lid of this case is so constructed as to lift and form a book holder, and may be used for all classes of reference books, such as dictionaries, cyclopaedias, atlases, or other books too bulky to handle conveniently without a rest. The book holder is quickly and easily raised and locks itself at any height without adjustment; when raised slightly, it forms a **WRITING DESK OR TABLE**. This case is 18 inches wide, and 34 inches high.

No. 2 is designed to be placed in the corner of a library or parlor, and is adapted for use as a pedestal for vases, artistic pottery or statuettes, as well as for a book case. This case is 20 inches wide and 45 inches high.

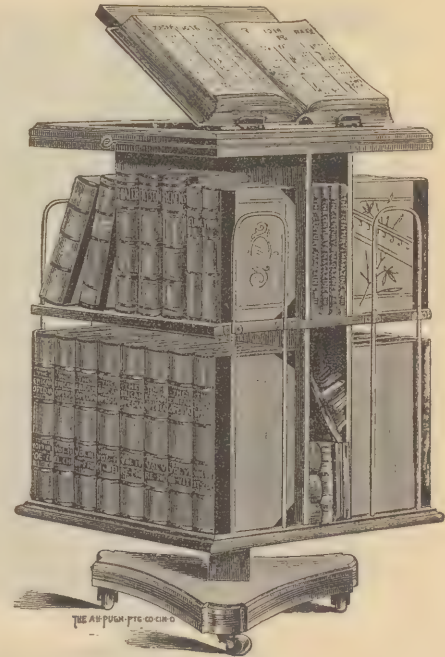

No. 3 is specially designed for the use of lawyers, or in public offices where a large number of reference books must be used, which require to be frequently consulted, and must necessarily be near the desk. This case is 22 inches wide and 56 inches high.

All styles of cases are constructed of hardwood throughout and may be easily moved from place to place, being on heavy casters.

We can furnish them in any kind of wood desired on short notice, but keep in stock only those made of walnut and cherry, imitation mahogany.

COMBINED REVOLVING BOOK-CASE AND REFERENCE-BOOK HOLDER.

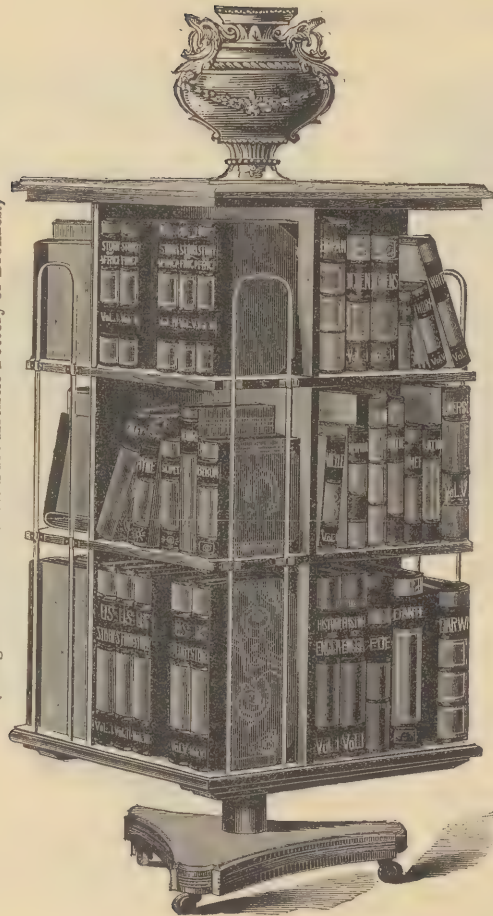

No. 1.

(WITH BOOK-HOLDER OPEN.)
Price, \$16.00.

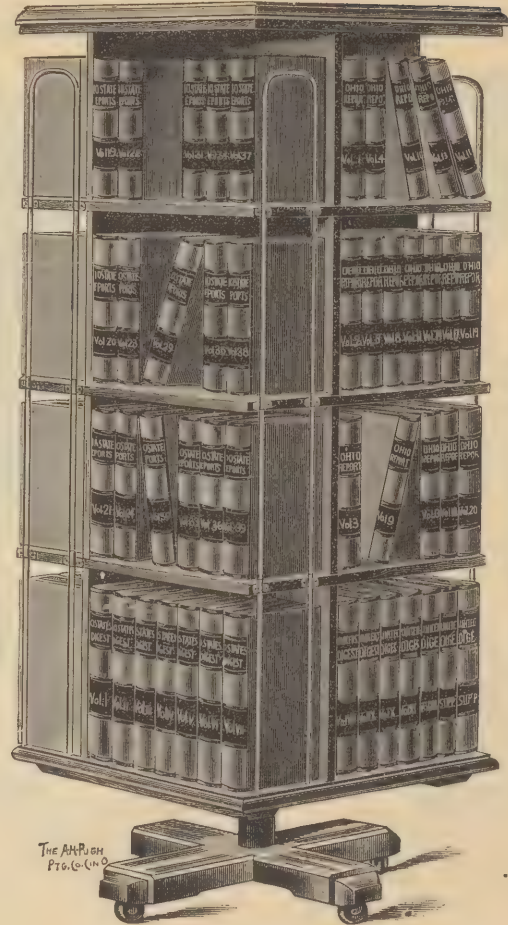

THE CABINET REVOLVING BOOK-CASE.

(Designed also for Pedestal for Artistic Pottery or Bronzes.)

No. 2. Price, \$19.00.

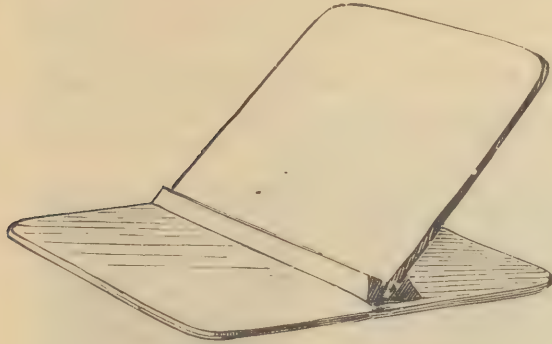

(Designed for use of Lawyers and in Public Offices.)

No. 3. Price, \$22.00.

THE AMERICAN
FIG. CO. U.S.A.

THE STUDENT'S BOOK-REST.

It is constructed in two pieces, a base and an upright section. Across the base is a double slotted cleat, into which the upright is placed, admitting of two angles of inclination. The size of the base is 10 x 12 inches and of the upright 9 x 10 inches. It is made of light wood and finished either the natural color or stained in imitation of black walnut. Its weight is less than two pounds. It is designed to place on the desk or table, and will support large and heavy books. It accomplishes its purpose perfectly.

The Book-rest is useful in the library, public reading-room, and the counting room, for type writers in copying, and is particularly valuable to students and children, either in school or at home. It saves the eye-sight by permitting a direct vision, and is beneficial to growing youth by preventing the tendency to stoop while studying. Its low price makes it available to all.

PRICE, 50 cents.

With wire springs for holding the leaves, such as are used on our Perfection Desk, 10 cents extra.

Sent by mail, post paid, for 25 cents extra.

THE HARVARD BOOK RACK.

A strong, handy, and ornamental device for safely holding any number of books on a desk or table. Two flat metal plates rest on the table, and carry two upright, handsomely finished end-pieces of black walnut. Between these are set the books, whose weight holds the end pieces firm, while these hold the books upright. The rack holds equally well four volumes or forty. When more books are put in, the ends slide so much farther apart. If any are removed, the ends approach each other. In every case the Harvard is just full, while common racks are either too full or not full enough to keep the books upright. A model of practical convenience and as handsome as useful. When not in use the plates and ends pack snugly together in the neat shallow case.

PRICE, \$1.00.

THE UTILITY ADJUSTABLE TABLE.

THE peculiarities of this Table are, first : that it can be raised or lowered in height to suit the convenience of the one using it; and second, that it can be folded up at the shortest notice, to occupy the smallest possible space.

At any height to which the table is adjusted, it is perfectly rigid ; as much so, as though it were neither adjustable or folding, or as though it were made for the particular height at which it is adjusted. So perfect is its principle, that there are no loose joints to render it unsteady, nor will it become so by constant use ; at the

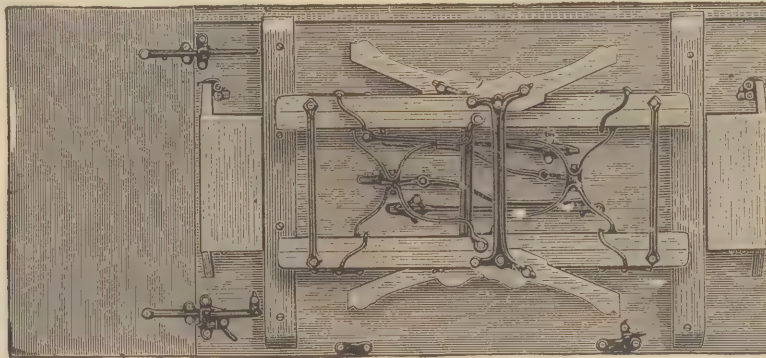

same time, it is so easily adjusted or folded, that a child can manipulate it, and no danger need be apprehended of its getting out of order in a life-time. It also combines with its perfection of mechanism, such symmetry and beauty of design, as to render it an ornament for the parlor. These important points successfully accomplished, its wide range of usefulness is no longer a matter of conjecture. It has honestly earned its accredited rank among the foremost useful inventions of the century.

Thousands of ladies congratulate themselves to-day that in its possession, the annoyances and back-aches occasioned by lap-boards, and getting down on the floor to cut out their work are forever ended. For by its use they can sit in their own favorite chair, adjusting the table to suit their convenience, and with the addition of the leaf which, by the way is an important auxillary, by which the table may be increased in length or breadth with drawers for implements, and yard-stick at hand, they can accomplish double the work in half the time, and with greater ease.

THE UTILITY ADJUSTABLE TABLE.

To illustrate the principle of the table and its attachments, and show the manner of working it, we refer to cut A, which represents the table folded, with leaf attached to the end, and the fixtures by which it may be attached to the side, also the drawers and how they are arranged, and how the yard stick is disposed of.

The legs consist of two sections, the one sliding against the other. The different heights at which the tables may be adjusted are 22 1-2, 24 1-2, 26 1-2 and 28 1-2 inches.

A.

To adjust the table for use, release the legs which are held by a self acting catch and unfold them, when they will instantly lock and become firmly braced.

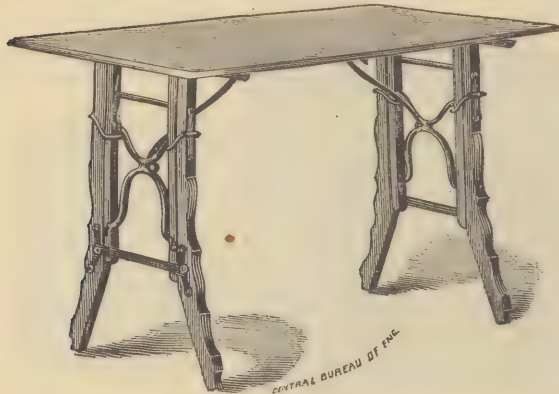

To raise the table, put the foot on the lower brace, and lift the top with the hand, one side at a time. It may be stopped at any of the points of adjustment.

To lower the table, first raise it to its extremest height, which is HIGHER than the highest point (28 1-2 in.) of adjustment, and the clevises, which are self acting, will reverse, and press it down to the lowest point, which is necessary in order either to raise it again or to fold it.

To fold the legs, draw the bolt by which they are locked on the under side of the top.

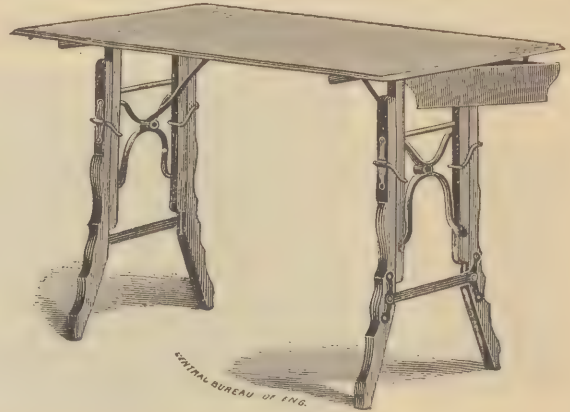

THE UTILITY ADJUSTABLE TABLE.

Cut B represents a standard size table without drawers or leaf, adjusted at its lowest point, which is 23 inches.

B.

Cut C represents the same table with drawers, adjusted at the second point, which is 25 inches.

THE UTILITY FOLDING TABLE.

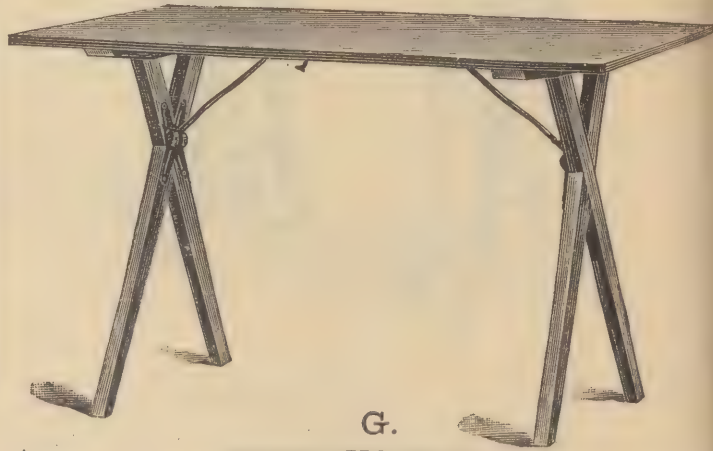

The folding tables represented by cuts F and G are designed to meet a large demand for a first-class low priced folding table, where adjustability of height is not essential. The principle of folding applied to these is the same as that of our Adjustable tables. The legs are the strongest that can possibly be made. The tables when unfolded are perfectly rigid, capable of sustaining any amount of strain or weight; and after years of use will be just as firm as when new. They will be found particularly adapted to the use of army officers, camp meetings, dining tables in flats and small apartments; architects, draughtsmen and artists, for whose use we make them with an edge for T square; bachelor's and student's quarters, hotels, restaurants, butler's pantries, side tables, schools, dressmakers, kitchen, ironing, &c.

THE STANDARD THERMOMETERS

Give a new method of determining the temperature, and have the high merit of great accuracy.

The Dial, with its distinct graduation, and plain numerals, is as legible as any clock dial of the same size.

In this instrument strips of metal which expand unequally are soldered together in the form of spirals. By the action of heat or cold these spirals open or close, and their motion is multiplied by means of delicate wheels and pinions. A hand, carried by the pinion, shows the temperature upon a dial.

They admit of a variety of treatment in size and style of mounting, and the most simple is ornamental, as well as substantial.

The Fahrenheit scale is used, and the greatest care taken to accurately adjust each instrument.

They are carefully tested before they are allowed to leave the hands of the manufacturers, and are warranted to indicate the temperature with accuracy, and sustain their claim as the STANDARD THERMOMETERS.

Their perfect adaptability to use in the Sick-room, Hospitals, School-rooms, Churches, and for general household use, where it is essential to be constantly reminded what temperature is necessary to be maintained, renders them of great value.

Their claims are substantiated by the highest authorities, and volumes of testimonials have been written in their praise; we deem it necessary, however, to print but one.

HARVARD OBSERVATORY,

CAMBRIDGE, MASS.

Prof. WM. A. ROGERS, who has made a series of observations on the STANDARD THERMOMETERS, says:

"When the attention of the writer was first called to metal thermometers, little confidence was felt in the reliability of the claims put forward for them even as approximate indicators of the temperature. Much less was the expectation that they could in any sense be regarded as instruments of precision. A brief trial gave results so surprisingly good that it was considered worth while to make a more extended investigation. Application was therefore made to the manufacturers of these thermometers for the loan of a sufficient number of instruments, taken at random from the stock on hand. Four thermometers were in consequence sent to the Observatory for trial. Two were of the smallest pattern made [5 in.], with movements enclosed in case. The remaining two were of a larger size, and had an exposed movement.

"The various readings show, when tabulated, that in eighty-seven observations of one of the small [5 inch] thermometers, the average variation from the Observatory standard was but $0^{\circ}.31$. The other [5 inch] thermometer in fourteen readings averaged to vary but $0^{\circ}.26$.

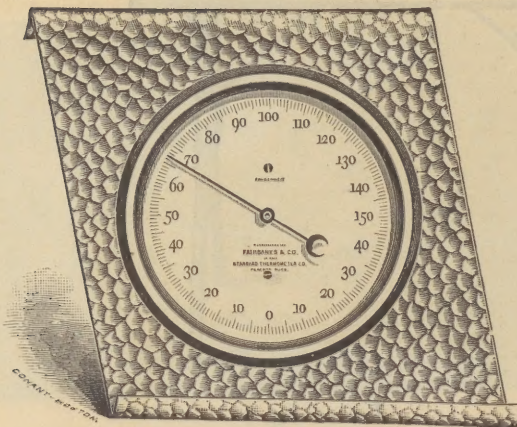

"The average variation of the two large instruments in 114 readings was $0^{\circ}.26$, ranging from $-0^{\circ}.57$ to $+0^{\circ}.15$."

SARGENT'S COMBINATION GYNECOLOGICAL LOUNGE AND OPERATING TABLE.

We insert this page to briefly call to the notice of physicians and surgeons our *Combination Gynecological Lounge and Operating Table*, which has attained a prestige hitherto unknown to any device, for the purpose for which it is designed.

We deem it only necessary to say in this connection, that in this article is combined a table for Gynecological work, having both longitudinal and lateral inclinations, adjustable to any height, absolutely rigid under any conditions, with every appliance necessary to insure perfection. It also comprises the most complete surgical table yet produced, and is so constructed that, when used as an ordinary lounge, there are no visible indications that it is other than an elegant piece of office furniture.

We publish in a separate form a catalogue of these goods, illustrated with details and prices which we will be happy to furnish on application.
